LIST OF TABLES

Table 3.1 Summary of the material culture associated with the MSA levels at BBC (Data obtained from Henshilwood 1995, 2008a; Grine et al. 2000; Henshilwood et al. 2001a, b; Grine & Henshilwood 2002) ........................................56

Table 3.2 Summary of the major types of mammalian fauna recovered from the MSA levels at Blombos Cave (Data obtained from Henshilwood 1995, 2008a; Henshilwood et al. 2001a, b) ........................................................................57

Table 3.3 The most common marine species identified in the MSA levels at BBC (Data obtained from Henshilwood 1995, 2008a; Henshilwood et al. 2001a, b) ............................................................59

Table 4.1 Typical U and Th-multi run cycle on the ICP MS .................................................................92

Table 5.1 Calculated sample and spike masses including the stratigraphic position of the subsamples represented by the De Hoop stalagmites sampled from Bloukrantz Cave (Blou1) and Kaisers Gat II (KG2.1, KG2.2 & KG2.3) ..................114

Table 5.2 Uranium series disequilibrium data for the De Hoop stalagmites from Bloukrantz Cave and Kaisers Gat II ........................................................................................................116

Table 5.3 Corrected uranium series ages for the De Hoop stalagmites .............................................117

Table 5.4 Summary of the $\delta^{13}$C and $\delta^{18}$O data obtained on the Blou1, KG2.1, KG2.2 and KG2.3 samples. The stable isotope values are reported relative to V-PDB ........................................................................................................126

Table 6.1 Summary of the De Hoop stable isotope data from Bloukrantz Cave and Kaisers Gat II and the associated changes documented for the Subtropical Convergence (STC), sea water temperatures (SST) and inferred global climate 161

Table 7.1 Published speleothem derived proxy records covering the southern Cape ........................................................................................................................................168
