Dedication

This research report is dedicated to all those in orthopaedic surgical practice now and to those who will follow this calling. Through their practice, knowledge, concern, and professional behaviour a real and positive difference is made in the lives of patients under their care.

Abstract

The discipline of orthopaedic surgery is a fast growing surgical specialty directed at the diagnosis and management of disorders of the musculoskeletal system e.g. acute trauma, fractured or dislocated joints, elective reconstructive surgery as well as related research. The standard of care in orthopaedic surgery treatment reflects the status of its evolution and what is currently available in terms of the knowledge, surgical expertise, orthopaedic implant materials, and equipment.

It is the duty of the orthopaedic surgeon to live up to the promise as best he or she can to heal when it is possible to heal and to provide the level of care expected that transcends simple surgical expertise and bio-technological intervention.

The informed consent process is an often neglected but vital component of the standard of care which has to satisfy prescribed ethical and legal requirements. This research is focused on how to heighten the awareness of, and to encourage engagement within the orthopaedic surgery fraternity with the informed consent process. If the informed consent is given more recognition within this group, it will benefit the potentially vulnerable orthopaedic patient, protect the

orthopaedic surgeon against litigation, and importantly, contribute to the ethical imperatives bound in a doctor-patient relationship.

For this research, a vast search of the available local and international literature has been perused and my finding is that the application of Ethics and recognition of the informed consent concept within the medical community in general is gathering momentum and it must be both supported and internalized by those in orthopaedic surgical practice.

Table of contents

Preface	1
Chapter 1: Informed Consent in Orthopaedics – A brief history	8
Chapter 2: Legal Issues in Informed Consent	14
Chapter 3: Ethical Issues in Informed Consent	28
Chapter 4: Awareness, Knowledge and Teaching of the Informed Consent Process in Orthopaedic Surgery	37
Chapter 5: The Informed Consent Process in Orthopaedic Surgical Practice	45
Concluding Remarks	61

Acknowledgements

My sincere thanks and gratitude and acknowledgement to my supervisor and mentor, Professor Donna Van Bogaert for believing in me, for the constant encouragement and for ever posing those very intellectually challenging questions that guided me through this very arduous task and in the end, made it easier and do-able.

To my dear parents, my late father Morathi and ever encouraging mother Marumo, for their endearing love and foundation set, thank you. May the Lord profusely bless you.

My dear wife, Nombuso and children, and the ever supportive brother, Tsekere, my late dearest sisters Pheladi and Mokgadi and the entire family, without you and your understanding this work would have been rendered an impossible mission, but with you I have walked the path.

Professor Mkhululi Lukhele, my Head of Department in Orthopaedic Surgery, you have always and remain a source of inspiration and a colleague I can always rely on.

My illustrious and reliable students Prakash Kana, Masego Morule, James Duze, Dina Simmons and Makhaya Twala you have always been at hand when the challenges of modern technology often became a reality to reckon with, thanks for being there when it mattered the most. May you have great success and be an example of the best of ethical orthopaedic surgical practice in your respective lives.
