ALCOHOL AND OTHER DRUGS: PREVALENCE, DEMOGRAPHIC CHARACTERISTICS AND PERCEIVED EFFECTS ON THE ACADEMIC PERFORMANCE OF HIGH SCHOOL STUDENTS WITHIN THE MOGALAKWENA MUNICIPALITY OF LIMPOPO PROVINCE.

BY

OWO IKWA OWO

SUBMITTED IN PARTIAL FULFILMENT OF THE REQUIREMENT FOR THE AWARD OF THE DEGREE OF MASTER OF FAMILY MEDICINE, FACULTY OF HEALTH SCIENCES, UNIVERSITY OF THE WITWATERSRAND.

JOHANNESBURG

NOVEMBER 2011

SUPERVISOR: DR ANNE WRIGHT
DECLARATION

I, OWO IKWA OWO declare that this research is my original work. It is being submitted for the degree of Master of Family Medicine at the University of the Witwatersrand, Johannesburg.

Part or whole of this report has not been submitted for any other degree at Wits, or any other university for any purpose neither do I intend to do so in the future before. All the sources I have used or quoted have been appropriately acknowledged by means of complete referencing.

..........................................................

20^{TH} day of November 2011
ALCOHOL AND OTHER DRUGS: PREVALENCE, ASSOCIATED FACTORS, AND EFFECTS ON THE ACADEMIC PERFORMANCE OF HIGH SCHOOL STUDENTS WITHIN THE MOGALEKWENA MUNICIPALITY OF LIMPOPO PROVINCE.

ABSTRACT

INTRODUCTION: Smoking, alcohol and other drugs use among high school learners has become a major public health problem across the globe. Here in South Africa, it is estimated that a large proportion of learners indulge in smoking and the use of alcohol and illicit drugs. Data from treatment sites across the country indicate that the number of patients who are below 20 years seeking treatment is escalating. These indulgences have been blamed for escalating school violence, rapes, robbery and accidents, all of which contribute to increased morbidity, disability and premature deaths. It is expected that the result of this study may provide additional understanding about learners’ drug and alcohol use. Such additional understanding can be of benefit to those responsible for the planning and implementation of cessation programmes.

AIM AND OBJECTIVES: To determine the extent of drug and alcohol use, the relationship between substance use and academic performance, and the factors that may influence cessation of alcohol and drug use among high school learners in Mogalakwena municipality.

METHOD: The protocol involved purposeful selection of one school from each of the nine education circuits within the Mogalakwena Municipality, Limpopo Province. The questionnaire was anonymous, requiring no data that can identify any learners. The sample consisted of five hundred and fifty five students aged 15 to 23(53% females and 47% males). The data was coded and analysed with epi-info version 6(Dutch) and this involved descriptive statistics and cross tabulations with specific reference to chi square test and students t-test yielding p-values.

RESULTS: The result of this study indicate that among high school learners in the Mogalakwena municipality 28% have smoked cigarette, 65% have drunk alcohol and 16% have used illicit drugs. In addition there was statistically significant difference between urban and rural learners in terms of smoking and alcohol consumption, with higher rates among urban students, but there was no difference in the use of drugs between the two groups. Also, there was statistically significant difference in drug usage and smoking with regard to age but no difference in alcohol consumption. Younger students tended to smoke more and also were more involved in the use of
drugs. More males than females were involved in smoking, alcohol consumption and drugs use. The most reported factors that could influence cessation of alcohol and drugs use were bad effect 49%, cost 23% and parents’ influence 15%. Among the parameters examined as proxies for impact of alcohol and other drugs use on academic performance, indications point to negative impact.

CONCLUSION: Alcohol and other drugs use is prevalent among high school learners in the Mogalakwena municipality and is reported to have a negative impact on academic performance. “Bad effects”, high costs and significant relationships are reported as the most important factors that could influence alcohol and other drugs use cessation and these may be important considerations in planning risk reduction.
ACKNOWLEDGEMENTS

I wish to express my sincere gratitude to the following people who in one or the other contributed to my success through the programme.

In particular I would like to express my gratitude especially to the following:

- Dr. Anne Wright, my supervisor, for her guidance, patience, support, and the encouragement she provided to see me through the programme.
- Dr. Sue Goldstein, for her support and guidance in the writing of my protocol.
- Special thanks to Professor Bruce Sparks for his understanding and encouragement, not only for me but also to everyone enrolled in the programme at Wits.
- Thanks to Professor Ian Cooper for his encouragement.
- The Limpopo Provincial Department of Education for giving me permission to conduct the study.
- To Dr. Sonny E. Oyama for making me take up a career in Family Medicine.
- My friends and reading partners Drs. Victor N. Onwukwe and Ben Nwaka for making me understand Family Medicine.
- My wife and partner in the journey, Dr. Inyang O. Etukudo for the sacrifice and for taking care of the children each time I was away.
- My children for providing the tonic that drives me to seek success.
- Mr. Sam Ntuli for some of the data analysis and tables in the preparation of the final document.

## CHAPTER ONE

**INTRODUCTION**

1.1 Background to the study                                           1
1.2 Dangers associated with early exposure to alcohol and other drugs  1
1.3 Adolescents’ alcohol and other drugs use in South Africa            2
1.4 Rationale for the study                                            2
1.5 Aim of the study                                                   3
1.6 Study objectives                                                   3

## CHAPTER TWO

**LITERATURE REVIEW**

2.1 Introduction                                                       4
2.2 The scale of the problem of adolescents’ substance use-the global perspective  4
2.3 Adolescents’ alcohol and other drugs use in Africa                  6
2.4.1 Smoking and burden of disease- the world at a glance              7
2.4.2 Smoking and burden of disease in South Africa                     7
2.4.3 Smoking is declining among American adolescents                   8
2.4.4 Smoking prevalence among South African learners still on the rise 9
2.5.1 Global burden of alcohol and disease                              10
2.5.2 Alcohol use and attendant problems in South Africa               11
2.5.3 Alcohol use during pregnancy in South Africa                      12
DEMOGRAPHIC CHARACTERISTICS OF LEARNERS

4.2.1 Age distribution of participants

4.2.2 Gender distribution of participants

4.2.3 Participants distribution by school grade

4.2.4 Responses to the item, I am living with

4.2.5 Responses to: number of people in household

4.2.6 Responses of learners to the question, what is the main source of income for the family

4.4. SMOKING AND DEMOGRAPHIC INFORMATION

4.4.1 Current smokers

4.4.2 Lifetime, past month and past week use of tobacco by participants

4.4.3 Response to the question ever smoked by gender

4.4.4 Response to the question ever smoked by class grade

4.4.5 Lifetime smoking by age

4.4.6 Response of learners to the question would you smoke everyday if free cigarette is provided

4.4.7 Responses to, ever smoked at school

4.5 ALCOHOL DRINKING AND DEMOGRAPHIC INFORMATION:

4.5.1 Current drinkers

4.5.2 Lifetime, past month, past week and binge drinking

4.5.3 Response to the question ever drunk alcohol by gender

4.5.4 Lifetime alcohol use by age

4.5.5 Response to the question ever drunk alcohol by class grade

4.5.6 Learners responses to the question of provision of free alcohol

4.5.6 Learners responses to the question ever drunk alcohol at school

4.5.7 Learners responses to the question ever been drunk

4.6.1 Current illicit drug use

4.6.2 Lifetime, past month and past week illicit drugs use
4.6.3 Responses to the question ever used any illicit drug---------------------------------------------42
4.6.4 Illicit drug use by gender----------------------------------------------------------------------------------------------------------------------42
4.6.5 Illicit drugs use by school grade---------------------------------------------------------------------------------------------------------------43
4.6.6 Illicit drugs use by age----------------------------------------------------------------------------------------------------------------------------43
4.6.7 Responses to the question which drugs have you tried (only the seven commoner ones listed) in numbers and percentages-----------------------------------------------44
4.6.8 Responses to the question, would you use drugs everyday if available free---------------------------------------------------------------44
4.6.9 Responses to, if ever used any illegal drugs at school-------------------------------------------------------------------------------------------45
4.6.10 Illegal drug use by school region------------------------------------------------------------------------------------------------------------45
4.7.1 Reason to stop using drugs-----------------------------------------------------------------------------------------------------------
46
4.7.2 Comparison of cigarette, alcohol and illicit drugs use between urban and rural schools----46
4.8.1 Responses to the question: how would you rate your school attendance before and after you got involved in smoking/alcohol/drugs use-------------------------------------------------------------------47
4.8.2 Responses to the question how would you rate your punctuality to school before and after you got involved in smoking/alcohol/drugs use-------------------------------------------------------------------47
4.8.3 Responses to the question how would you rate your home study before and after you got involved in smoking/alcohol/drugs use-------------------------------------------------------------------48
4.8.4 Table 26: showing responses to the question how would you rate your school performance before and after you got involved in smoking/alcohol/drugs use?-------------------------------------------------48
4.8.5 Responses to the question how many times did you repeat a class before and after you got involved in smoking/alcohol/drugs use?-------------------------------------------------49
4.8.6 Perception regarding impact of substance use between urban and rural learners-----------------
49
4.8.7 Perception regarding punctuality to school between urban and rural learners-------------------50
4.8.8 Perception regarding home study between urban and rural learners-------------------------------50
4.8.9 Perception regarding school performance between urban and rural learners--------------------51
4.8.10 Perception regarding class repeat between urban and rural learners--------------------------51
CHAPTER FIVE

DISCUSSION

5.0 Introduction-----------------------------------------------------------------------------------------------52
5.1.1 Smoking-----------------------------------------------------------------------------------------------52
5.2.1 Alcohol use: overview-----------------------------------------------------------------------------------------------5
5.2.2 Past month drinking-----------------------------------------------------------------------------------------------55
5.2.3 Bingeing-----------------------------------------------------------------------------------------------55
5.3.0 Illicit drugs use-----------------------------------------------------------------------------------------------56
5.4.0 Perceived influence of drugs use on school performance-----------------------------------------------------------------------------------------------57
5.5.0 Rural-urban and male/female substance use difference-----------------------------------------------------------------------------------------------58
5.6 Conclusion-----------------------------------------------------------------------------------------------60
5.7 Limitation of the study-----------------------------------------------------------------------------------------------61

CHAPTER SIX

6.1 Conclusion-----------------------------------------------------------------------------------------------63
6.2 Limitation of study-----------------------------------------------------------------------------------------------63

APPENDICES

1. Information sheet for participants
2. Questionnaire used for this study
3. Application letter for permission to carry out the research
4. University ethics clearance certificate
5. Letter of authorization from the Department of education, Polokwane
6-14. Letters of authorization from Principals of participating schools
DEFINITION OF TERMS:

1. ADOLESCENT: Adolescent is defined as the transitional stage of development between puberty and adulthood. Most people recognize the age range 13 to 19 years as constituting adolescent stage.

2. ILLICIT DRUGS: This defined as drugs are illegal drugs. However, this definition may differ from society to society. For instance, some drugs are considered illegal only when possessed in commercial quantity in certain societies, while even small quantities of the same drugs may attract death sentence in another society. It’s use here refers to any drug considered illegal in South Africa.

3. BINGE DRINKING: Bingeing is defined as taking five or more standard drinks in one sitting or within a short period of time. Some people define binge drinking as heavy episodic drinking. For the purpose of this study the former definition is applied here.

4. CURRENT DRINKER: This generally defined as drinking within the last one month and this is what it means here.

5. LIFETIME USE OF ANY AGENT: Means ever using the agent, even if it is only once, no matter how long ago.
