The development of Kwena Malapo into an informal settlement over the last 9 years |
This seemingly idyllic photo shows that social aspects can have a further reaching...

Different groups of people in the community are more vulnerable than others.

Social aspects can have a further reaching effect than any physical circumstance.

No running water means a long walk and long daily chores for the children that should be doing school work once they return home from school.

The makeshift washing lines and found material create texture and defined areas in the community.

xtra maths and english lessons on a Saturday try to compensate for the bad education these children receive.

Unfortunately due to resources and the voluntary basis of this project only a limited number of children are able to attend.

Some of the dwellings have extended coverings to try and extend the usable living space, especially in hot and wet weather.

One of the services that the community has very restricted access to is slowly becoming delapidated.

An example of the initial feedback from the community outlining their basic needs and issues in hot and wet weather.

It is a privilege to be given the opportunity to study and learn much about much. This is the beginning of a journey.
Abstract

This thesis is based on a community called Kwena Malapo near Lanseria. It is a group of people that sit between the threat of relocation and the opportunity to develop along with the new proposed development of Cradle City. The land on which the informal settlement exists sits on the border of this development and the community are fighting to stay where they are.

They lack basic services and infrastructure have poor education and no skills investment which makes them vulnerable. The aim of this thesis is to put forward the design of a community hub that will serve the community, give them an opportunity for learning and contribution as well as the ability to develop with the new economic growth, instead of facing relocation.

Along with skills development and business opportunity the hub aims to serve the 13 informal settlements that surround Kwena Malapo.
Personal Introduction

Years before this thesis was embarked upon, a group of friends found some families in a small informal settlement near Lanseria. After spending many months with the children in this community, a project called 'Lesedi' began. It was a Saturday school to supplement the poor education that they receive at the school they attend. This was a process of fetching children, driving them to a private school down the road, teaching them, feeding them, playing with them and taking them home again. Those were the simple things. Amongst the things we were ill equipped to deal with were the death of parents and siblings, the sale of children, poor health conditions, not enough food, a lack of jobs and skills... the list continues.

Lesedi still continues for a small community near Lanseria leaving at least eight larger ones without it. It focuses on education which will help the families in the community to an extent. But as the people in this settlement fight for their place in the city, what cries out louder than any of the problems but can be part of the solutions of many of these issues is belonging.

Social issues of this community will be looked at in the thesis with revelation of many intangible aspects of this lifestyle become evident. It is in recognising these and dealing with a solution that addresses these that I feel will be most successful.
Kwena Malapo, being an already established community expanded because the location is the most beneficial for the members of the community is fighting against their relocation.

Those who have jobs find their location strategic; it is close to Malibongwe Drive which is a main route for taxis. It is between Lanseria Airport and industrial district, and Kya Sands industrial sector.

The settlement already has some existing brick buildings including original workers accommodation, a church hall and a preschool which children within the community attend. Moving Kwena Malapo would mean having to replace this existing limited community building infrastructure and taking jobs away from ladies within the community.

Relocating this community also seems to be the extension of the remnant of forced removals from South Africa's past. It too displaces a group of people who have little option of where to stay in their current economic situation and puts different groups of people together under bad circumstances where there might become resentment based on competition for jobs in the new area or cultural differences which may be exacerbated by poor living conditions. It raises constitutional rights issues based on the betterment of infrastructure and living conditions. The move does not guarantee these better living conditions or necessarily benefit the people being moved. It is also difficult to determine what affect will it have on the community being moved in on. Kwena Malapo might in fact be put in worse living conditions than they find themselves in now. And, with Kwena Malapo being on the boarder of the Cradle City development area and within the proposed Lanseria Development Framework, moving the existing settlement would seem to be a purposeful separation of these people from any opportunity to develop and contribute to the emerging commercial hub.
In order to help the community function properly, grow and formalise the community, and increase the economic capacity of it, the following are proposed interventions:

To leave the informal settlement where it is and to use it as an anchor and magnet to the informal settlements around it.

To provide basic services for the current community and the surrounding communities including basic healthcare services, home affairs services, police services, public library and educational services and social/communal space.

To invest in developmental programmes through design of classrooms, lecture rooms, workshops, urban farms, retail space, a restaurant, and a car wash.

To provide basic infrastructure of electricity, clean water and ablutions and kitchens.
It is important to look at the livelihoods of the community following on from the design of a building and the analysis of theory and their current situation. This will be looked at in the following ways:

The part of the thesis that most naturally takes technical precedence is the self-reliance factor, the aspects that will serve the community in being able to develop.

This could be done through a systems approach grouping electricity generation, water collection treatment and recycling, composting for farming and linking this to the mini-urban design and the structure and skin of the building.

Research on systems and technologies that can do this, buildings that have innovative and appropriate ways of doing this for the community in which it is situated.

The final presentation of technology used in the building solution will be a series of plans, sections and axonometric drawings that will show each systems path and then details of critical points in the system and how they work.
Long term

Services and infrastructure
Skills development

Very poor conditions

Short term

The settlement lacks any basic services. These services can be provided and will be necessary irrespective of what kind of development takes place in the future.

Education

The ability to give every person in the community the option of eating a healthy, balanced diet.

Growing their own food would give the community more options of resources, develop skills and the option of small business development.

The community need more buying power, buying food needs to become more affordable.

Housing

Food

Community issues

Poor conditions

Community and Community Theory

There must however be some guidelines that can be helpful as a starting point and the theory on community. In looking at self-reliance as an ever growing necessity to those not being provided for by a governmental system or a charitable institution, and even those that are currently being provided for may not be able to count on provision with the rapidly expanding population. Self-reliant communities are able to withstand the fluctuation of economic and social issues with much more stability than those who are reliant on the financial provision and the social complications that surround them, xenophobia being one of the prevalent examples in South Africa. Self-reliance extends from the ability to provide for oneself; or a community for one's community; through job creation and skills development, good education within the community and financial loyalty to the community, as well as organisational aspects that help the community to function in a very efficient and secure manner.

Location and the issue of relocation will be considered in terms of relationship and opportunity, and the approach to relocating a community. It will look at the impact of relocating the community and challenge the argument for the relocation of a community. This will then serve as a basis for the discussion in part two of the chapter in the discussion of the community of Kwena Malapo.
Figure 12: The development of Kwena Malapo into an informal settlement over the last 9 years.
A group of individuals that live together in one place becomes a community of people. In this there are two aspects of community that need to be considered, the first is the people within this community and the second is the environment surrounding this community. Each of these contributes individually to the state of a community but also is in tension with each other to create social anomalies found within any group of people.

Looking in more depth one can quickly recognise that there are multiple characteristics of a group of people that affect them both individually and as a group. It has been suggested that these inconsistencies between groups are critical because they are how we begin to understand a group and its behaviour, character and lifestyle. Following on from this one can then determine the priorities of the group and through this a specific and appropriate design can be generated for them in their environment. It can prevent us from falling into the trap of designing for the group called people or South Africans or any unhelpful generalising terminology. (Awotona, 1997, p. 11)

It is quite apparent usually to see and understand what the needs of a community are, but what needs to be uncovered is the wants of the community and this largely seen through behaviour and interaction with a group of people because people differ to the extent to which they are affected by environments. (Awotona, 1997, p. 9) It is a common misconception that large parts of community behaviour derive only from historical culture and that when interacting with a group culture often becomes the first surface of interactive sensitivity, however it is important to seek out and highlight the patterns and consistencies that emerge in a community outside of culture because in many instances these commonalities can be a better binding and more importantly can become the areas where a community finds its identity and a path of development. If attributes such as misplaced culture are misused they can become harmful to the way in which a community develops. The culture needs to be defined in terms of historical culture but also the adoptive culture of a group.
Other aspects of communities that need to be engaged with lie in the behaviour of the individuals in a group, the age and gender demographics, the skills available and the resources available. Individual wants need to be weighed up against group wants and the organisational structure within the community needs to be analysed and prioritised. One of the most telling aspects of how a community functions is evident in how a community firstly decides on how it will deal with crises (whether it be resources, behavioural, security, natural) and how this same community actions in one of these situations. Behaviour of a community can be defining for the experience of many people, but especially children within the community.

Once these are identified and prioritised the environment can be brought into the equation; it comes in at this point because it is rarely defining or formative in behaviour except for negatively contributing factors which severely limit behaviour or positive attributes of environments that become catalysts making possible behaviour which was previously blocked. (Awotona, 1997, p. 9) Social aspects can have a further reaching effect than any physical circumstance. The evidence lies in the incongruent comparison of wealthy, comfortable not necessarily happy individual or group to the poor, struggling not necessarily unhappy individual or group. What the environment has the opportunity to do (and particularly the built environment in this regard) is providing resources and opportunity to allow a group to behave, achieve and be characterised without the confines that a bad environment or poorly structured environment inhibits. The conclusion of many theories on communities is that grouping people who positively affect the livelihood and experiences of those around them can vastly outweigh many a difficult physical circumstance in which one finds them. In fact many successful, developing communities grow and thrive despite their current circumstances. If the essence of community is the people around you it becomes a greater tool at your disposal.

**Social aspect of community**

By author

*Figure 13: This seemingly idyllic photo shows that social aspects can have a further reaching effect than any physical circumstance.*
6. stealing
7. violence
8. drunkenness
6. lack of ownership
6. social activity & sport
6. poor healthcare
5. child vulnerability
5. jealousy
5. hopelessness
5. distrust
5. shame
Some of the major social issues the affect settlements such as Kwena Malapo lie far deeper than just the things that they lack. It is what they lack and how this works itself out in the community in different ways. One of the more individual outworking of a person in these living conditions, specifically in Kwena Malapo, are feelings of hopelessness, shame, jealousy and distrust. These have manifest themselves out of their lack of ownership, poor services and healthcare, and lack of entertainment resources.

The behaviour that is encountered in the community includes stealing, drunkenness and violence, the most prevalent being that of drunkenness. The presence of these behaviours in the community makes different groups of the community either more vulnerable to directly be involved in these behaviours, or to become victims of people who practise them. In Kwena Malapo the children and women are particularly vulnerable to the men who get drunk regularly.

Infographic showing social issues in Kwena Malapo
By author
Figure 14: Different groups of people in the community are more vulnerable than others
Informal settlements are defined by the lack of basic amenities and very poor living conditions and are a reality to millions of South Africans. With very little progress made in recent years communities are left with no basic sanitation or a clean water supply, hazardous health and safety issues such as fires, security and disease (Misselhorn, 2012). Johannesburg also faces its additional obstacles in relocating informal settlements due to either repeated flooding or, existing tensions between the informal settlers and locals or landowners. The Johannesburg government has also had to concede to the following in terms of its terms of its expected service provision and service delivery responsibilities:

- It has inadequate service delivery
- It has not provided and poorly maintained any information for both current and proposed projects in the area
- The limited or lack of knowledge or understanding of applicable planning processes and systems influencing the delivery process of residents
- Its failure in addressing high demand for housing, not just access to services (City of Johannesburg, 2012)

The implications of this far outweigh the immediate needs being met and are compounded both for the individuals and other services. Lack of clean water, heating and proper sanitation coupled with poor nutrition that is experienced by most people in informal settlements means a huge impact on health and affects both the ability of the individual to work or contribute in their community and puts strain on the public healthcare system. (Disler & Olver, 1984)

Informal settlements come about due to migration of rural groups into urban areas in search for work and due to the large influx and the lack of accommodations and space within the cities groups of people are pushed further out and are left with little option but to appropriate land, usually owned by the government. (Clinard, 1966, p. 50) Informal settlements have generally been established outside the formal land allocation system and this has had an effect on many people who are forced to live in peripheral areas where they are generally denied access to basic services such as education and healthcare. (Olufemi, 2001)
Social aspects of community

By author

Figure 15: Social aspects can have a further reaching effect than any physical circumstance.
The lack of water provision
By author

Figure 16: No running water means a long walk and long daily chores for the children that should be doing school work once they return home from school

This is less than ideal and brings about difficulties with every member of the group. Older members do not have access to the care and find it difficult to be mobile and find jobs; the children are often in poorly managed and under resourced schools and are at a staggering disadvantage to their wealthier counterparts, usually and still the case for many South Africans this is reflected racially. These overcrowded under developed areas continue to be leftover injuries from Apartheid and the neglect that many experienced, and although South Africa in theory gives equality to all, in practise the minority are still benefitting from the oppression of the underprivileged, uneducated victims and children of victims of the apartheid regime (Disler & Olver, 1984). Unfortunately informal settlements probably represent the best available option for any person in a position of depravity, relative to what their needs are and what is available and affordable for them in the city. And although they are facing most of the struggles mentioned above on a daily basis, members of informal settlements actually gain easier access to any employment, any education and possibly many other services that are accessible to the best alternative by being in the place that they are. Other options tend to be further away meaning less accessibility or at a much higher cost. It is also because of this, that low income, subsidised houses, often in undesired or inaccessible locations are sold informally by recipients who would rather return to living in informal settlements. (Misselhorn, 2012)
The use of language such as slums eradication or slums elimination is problematic, it perpetuates the idea that informal settlements and their residents are considered illegal and unwelcome, that they fall outside of the human rights of our country, and that the state’s primary response to them will primarily be through evictions and relocations. (Misselhorn, 2012) This negative association has led many people to think of informal settlements and their organic nature as the issue to solve rather than a character to embrace. The real reason that we refer to them this way is because we find any other truer description of the living conditions of these communities quite offensive. It is also not the complete organisation and structure or formalising of a settlement that makes it better; many informal settlements provide community that built up neighbourhoods and urban sectors do not. We need to strip the negative connotation that the informal settlement has developed as it is very untrue to its synonyms: relaxed, comfortable, natural and familiar. Beauty is most often found in the mismatched, handmade materials and tapestry of a township long before it is found in the townhouse complex with a choice of three floor plans or the security estate surrounded with electric fencing, barbed wire and badly proportioned pseudo European style buildings.
Mismatched colour in the community

By author

Figure 17: The makeshift washing lines and found material create texture and define areas in the community,
After speaking to the people in the community and spending time with them of the last two years it has become evident that the practical supply of basic living conditions are only part of the problems this community faces and is only as important as the social conditions that surround them. These include education and the facilities that are associated which affect the way the community functions. The younger members of Kwena Malapo are very aware of their disadvantage not having access to the internet and a library as well as sporting facilities. The whole community also lacks a gathering area or areas that they actually have access to and feel that there is a particular issue with entertainment. This might at first seem to be a shallow or frivolous issue but the lack of structured facilities that allow for different types of entertainment and relationship building opportunities in a safe environment actually promotes a more creative way for the youth to entertain themselves and has also lead to an alcoholism problem with some of the men amongst the community.

All of the above issues can be dealt with in varying degrees and even be completely fixed quite practically. The issues that need to be taken into account are quite a lot more complicated than they seem at first. One of the immediate complications surrounding this community lies in the new development strategy and framework that has been set up in and around the Lanseria Airport expansion project. The current land on which Kwena Malapo is sitting is demarcated for commercial use; subsequently the relocation of the people living there. This thesis will assume however that relocation is not an option and the solutions while including housing will respond to the commercial demarcation of the property. The second complication is the attitude of the people living in the community. This is not to be mistaken for an attitude problem but needs to be looked at in the stark deductions of the experiences of this community. It is doubtful as to whether this community is in the minority in its experiences but it will always be unique in its individual response to it and this will always be a consideration when looking at providing this community with what they need and what they need.
Figure 18: This image shows the very close quarters that the residents of Kwena Malapo live in, although it is semi rural the urbanisation of this area will magnify the lack of service and infrastructure to communities such as this.
the additions made by informal settlers

the original workers buildings built by the land owner
The informal settlement in itself is not the problem; it is their inability to develop and be provided for and empowered that creates an overrun of people, in communities, without basic provisions such an urgent issue. A settlement should be allowed to be as informal or formal as they desire but should not lack the resources to decide what they would and would not like to be informal about. We therefore embrace the community that is situated in an informal settlement, understand what they and build a solution that will be a catalyst to facilitate them to build up their community in the way that they want; the best way to do this is by helping the community to become self-reliant.
Their experience is outlined in the scepticism of the following repeated incidences that have taken place; more broadly the issues of promise much and deliver little and more specifically the feeling of abandonment of the community. This has happened in the following instances; by the Methodist Church who set out to uplift it, the continuous well-meaning but unfinished and poorly executed interventions and projects of groups coming into the community but not really knowing the community (this includes farming tunnels and short term donations of toys, food and stationary). This has led to a growing apathy and hopelessness amongst members of the community for ever bettering their personal living situations.

The long-term underlying socio-economic causes of informal settlements need to be properly recognised and more effectively addressed. This means a greater focus on much better education, appropriate skills development, and economic growth. The provision of basic infrastructure and housing but also a significant attention should be given to the development of our investment into people, which is the only sustainable basis for the socio-economic reformation in South Africa. (Misselhorn, 2012). This is the basis on which Kwena Malapo needs to be restructured and the approach toward aiding them needs to be taken with sustainability in mind.

With this community consisting of many older members having a limited formal education and the younger portion of the limited good education but good access to bad education, the focus of development for them will be on education and skills development. The community needs to be invested into so that they can continue on to their goal of self-reliance and general upliftment. Education is a high priority to the community with them already
iengaging their children in an adult education programme run through ABET and a Saturday School run on the premises of a private school in the area run by a few individuals for the children. Their participation in these programmes on a long term basis has proven their commitment to education and their desire and high value for education. This needs to be harnessed and expanded into skills in order to benefit other members and aspects of the community.

Along with education this community has immediate needs including trades development, construction skills and farming skills. This will enable the community to grow their own food, build onto their facilities, repair and extend any infrastructure provided. The community needs to invest back into themselves and commit to a programme that will involve all members of the community who want to realistically contribute.
One initiative in the community has sparked a willingness to and belief in change and development. Through a programme run by a few individuals with a group of children in the community every Saturday, one of the students from Kwena Malapo has applied for and received a scholarship to the private school in their area. For many of the children attending the Saturday programme and for many of their guardians witnessing the improvement in the childrens academics, this situation has allowed people from a different community with available resources to contribute by building relationships and finding out what is most important in the community. Taking this approach, the most obvious enabling activities that would lead to the success of this relocation would be:

1. Taking the community, its needs, wants and opinions seriously

2. Providing a real relationship and developing mutual trust with the people in the community

3. Being honest about the realities of restraints and resources and what exactly this change will provide

4. Giving much and expecting little as a starting point with the aim of reversing that relationship to encourage a self-reliant community

5. Actually building homes and facilities before expecting the community to move or at least making the product tangible to the community.

JOB

WHO DO YOU LIVE WITH I live with my kids.

HOW WOULD YOU DESCRIBE YOUR LIVING CONDITIONS
My living conditions is not fine because I am living in the informal settlement where there is no electricity and no development at all, but I am happy because I am staying with my children.

WHAT DON'T YOU HAVE THAT YOU NEED THE MOST
I need a better job with better salary.

WHAT DON'T YOU HAVE THAT YOU WOULD LIKE
I would like to stay with my mom and my kids in a better house with everything I need inside.

HOW DO YOU FEEL ABOUT THE PEOPLE THAT LIVE AROUND YOU
Well I can say that I am not feeling okay with them because we see them they are full of selfish they want everything to be owed by them.

WHAT ARE THE MAJOR PROBLEMS WITH WHERE YOU LIVE
Electricity, children can't study using the candles.

HOW DO YOU FEEL YOU FIT INTO THE CITY
I don't feel fitting the city at all.

Community questionnaire
