

TABLE OF CONTENTS

1. INTRODUCTION AND LITERATURE REVIEW	7
1.1 Noise and Noise Induced Hearing Loss.....	7
1.2 The Global and National profile of NIHL	7
1.3 SA government interventions	8
1.4 The response of the SA Mining Industry	9
1.5 Compensation Claims	12
1.6 Temporary Threshold Shift.....	14
1.7 Impact Noise versus Steady State Noise.....	15
1.8 Consequences of NIHL.....	15
1.9 Changes at cellular level	16
1.10 Clinical measurement for NIHL	18
1.11 Purpose & objectives	20
2. PILOT STUDY AND ETHICS	21
2.1 Pilot Study.....	21
2.2 Ethics approval and Employer permission	22
3. METHODS (including study design & diagnostic criteria)	22
3.1 Study Design.....	22
3.3 Diagnostic criteria.....	24
4. RESULTS AND DISCUSSION	25
4.1 Demographics and disease patterns	25
4.1.1 Study population	25
4.1.2 Age distribution	26
4.1.3 Subjects acquiring disease between 1999 and 2004	27
4.1.5 Age and Down-sloping	31
4.2 Aggregates and Means.....	33
4.3 Statistical Testing.....	34
5. DISCUSSION	35
5.1 Possible Bias	35
5.2 Trends for NIHL	37
5.4 Ageing & down-sloping.....	40
5.5 Temporary Threshold Shift (TTS).....	41
6. RECOMMENDATIONS AND CONCLUSIONS	41
6.1 Recommendations.....	41
6.2 Conclusions.....	44

7.	REFERENCES	45
8.	APPENDICES	48
8.1	Appendix 1 – Notching at 4 KHz (see left ear)	48
8.2	Appendix 2 – Downsloping /Prebysacusis (see especially left ear)	49
8.3	Appendix 3 – NIHL: Coles’ criteria (see especially left ear)	50
8.4	Appendix 4.....	51
