Corrections of MMED titled: Breast hypertrophy and Gynaecomastia in HIV-associated Lipodystrophy, a problematic side-effect of life-saving antiretroviral therapy

Page V line 5: Replaced 'We' with 'This study'

Page V line 20: Replaced 'We' with 'This study'

Page Vi line 5: Replaced ‘Dr. C Menezes, Dr. C Serrurier, Dr. S Takuva and Prof. I Sanne who are the co-authors who are involved in the publication of the article, I thank them for their contributions.’ with ‘Dr. C Menezes, Dr. C Serrurier, Dr. S Takuva and Prof. I Sanne who are the co-authors involved in the publication, I thank them for their contributions’

Page Vii – Xi: Page numbers reformatted

Page Viii, line 15: ‘Aim of study’ changed to ‘Aims of study’

Page XiV, line 6: Changed ‘The first line therapy’ to ‘First line therapy’

Page 4, line 15: Changed ‘One of the earliest reports of d4T-related lipodystrophy compared the prevalence of lipodystrophy among patients on d4T-based regimens, at 63% to patients on zidovudine (AZT) -based regimens at 18,75%’ to

One of the earliest reports of d4T-related lipodystrophy compared the prevalence of lipodystrophy among patients on d4T-based regimens (63%), to patients on
zidovudine (AZT)-based regimens (18.75%).

Page 6, line 3: Changed ‘Host factors include advanced age, female sex, greater nadir of CD4+ count (<350) and higher viral load (>100,000 copies/ml) at commencing HAART, higher baseline triglyceride levels and coinfection with hepatitis C.’ to
Host factors include advanced age, female sex, greater nadir of CD4+ count (<350), higher viral load (>100,000 copies/ml) at the onset of HAART, higher baseline triglyceride levels and coinfection with hepatitis C.

Page 10, line 17:
‘Aim of Study’ changed to ‘Aims of Study’.

Page 13, line 17:
‘We estimated crude and adjusted hazard ratios of progression to lipodystrophy using Cox proportional hazards models’ changed to ‘An estimation of crude and adjusted hazard ratios of progression to lipodystrophy using Cox proportional hazards models was made.’

Page 39, line 1: Chapter 5 starts on a new page
The study was limited to 3 months of data collection. We had initially planned to interview 1000 patients and this was calculated according to an initial 3-day pilot study. Unfortunately, we had not factored into our calculations that the clinic closed early on Fridays and closed in mid-December for year-end holidays. Was changed to ‘The study was limited to 3 months of data collection. I had initially hoped to interview 1000 patients and this was calculated according to an initial 3-day pilot study. Unfortunately, I had not factored into my calculations that the clinic closed early on Fridays and closed in mid-December for year-end holidays.

Page 40, line 1: ‘We’ was changed to ‘I’.

Page 41, line 16: ‘In a busy clinic setting, lipodystrophy may be difficult to diagnose and clinically significant cases may be missed by physicians not looking for this side-effect.’ Has been added to the conclusions

Page 42, line 12: ‘Highly sensitive and specific, non-invasive screening methods for diagnosing lipodystrophy in a busy clinic setting need to be developed so that early diagnosis and management of these patients can be instituted.’ has been added to recommendations
