A GENERAL REVIEW OF THE DEVONIAN FOSSIL PLANTS FOUND IN THE CAPE SYSTEM OF SOUTH AFRICA

by Edna P. Plumstead

CONTENTS

SECTION I  INTRODUCTION

A.  The reasons for revision
1. The inadequacy of previous records 1
2. The availability of new material 1
3. The importance of South African fossil floras in world stratigraphy 2
4. Evolutionary significance 2
5. The importance of palaeontological records in the current search for oil 2

B.  The material studied
1. Difficulties of classification 3
2. Source of the fossils described and acknowledgements 3

SECTION II  A BRIEF SURVEY OF THE GEOLOGY OF THE CAPE SYSTEM

A.  The Cape Province Fold Belt
1. Distribution and folding 7
2. The Table Mountain Series or T.M.S. 7
3. The Bokkeveld Series 8
4. The Witteberg Series 9
5. Conditions of Deposition 9
6. Derivation of the sediments 9
7. Map showing main outcrops and fossil localities 10

B.  Northern extension of the Cape System
1. In Natal 11
2. In Malawi 11
3. In the Orange Free State 11

C.  Stratigraphical Position of Fossil Plants described
Table 12
SECTION III  DESCRIPTION OF THE FOSSIL PLANTS

A. General
1. Naming of the fossils
2. Order of description
3. Growth and environments of the plants
4. Classified list of Plants described

B. Sub-division Psilopsida
1. General
2. Genus Dutoitia Hoeg
   (a) Dutoitia pulchra Hoeg
   (b) Dutoitia alfreda sp. nov.
   (c) Dutoitia maraisia sp. nov.
   (d) Comparison of Dutoitia
3. Psilophytalean axes—De Doorns
   (a) Occurrence
   (b) Description of specimens
   (c) Discussion and Comparison
4. Palaeostigma sewardi Kräusel and Dolianiti
   (a) History of genus
   (b) Description of specimens
   (c) Details of the scars and discussion of their origin
   (d) Comparison and remarks

C. Sub-division Lycopsida
1. General
2. Classification
3. Genus Drepanophybus Göppert
   (a) Systematic position
   (b) General distribution
   (c) Drepanophybus schwarzi sp. nov.
   (d) Drepanophybus kowiense sp. nov.
4. Genus Protolepidodendron Krejci
   (a) General
   (b) Protolepidodendron eximium Frenguelli
   (c) Protolepidodendron theroni sp. nov.
5. Genus Archaeosigillaria Kidston
   (a) General
   (b) Archaeosigillaria caespitosa Schwarz nov. com.
6. Genus Leptophloeum Dawson
   (a) General
   (b) Leptophloeum rhombicum Dawson
(c) *Leptophloeum australe* (McCoy) Walton in Australia
   (i) History ........................................... 39
   (ii) Recent evidence of occurrence and age in Australia .......... 39

(d) *Leptophloeum australe* in Africa 41

7. The controversial genus *Haplostigma* Seward .............................. 43
   (a) The confusion in early descriptions .................................. 43
   (b) Description of specimens of *Haplostigma*—old and new (i) to (vii) 44
       (i) Paratype of *H. irregularare* spec. B ........................... 44
       (ii) Paratype of *H. irregularare* spec. V236 ......................... 45
       (iii) Type spec. *H. irregularare* ................................. 45
       (iv) *H. irregularare* from Port Alfred .......................... 46
       (v) *H. irregularare* from Schietkraal .................................. 48
       (vi) Round scarred stems in sandstone .................................. 49
       (vii) Indeterminable Lycopods ........................................... 50
   (c) Comparison with other fossil plants ................................. 51
       (i) Southern hemisphere .............................................. 51
       (ii) Northern hemisphere ............................................. 52
   (d) Speculations on the common association of round and rhombic scarred stems in Devonian rocks ......................... 53
   (e) Summary of *Haplostigma* evidence and its systematic position .... 53

D. Sub-division Sphenopsida
   Genus—*Calamophyton* Kräusel and Weyland
   1. General .............................................. 54
   2. *Calamophyton capensis* sp. nov. ......................................... 55
   3. Discussion and comparison .............................................. 56

E. Problematical Megaphyllous Devonian Plants
   1. General .............................................. 57
   2. *Platyphyllum albanense* sp. nov. ......................................... 58
   3. Significance .............................................. 58
   4. Comparison .............................................. 58
   5. *Archaeopteris*, *Psigmophyllum* ........................................ 59

F. Stems of uncertain affinities
   1. Stem Type A .......................................... 59
   2. Stem Type B .......................................... 60
   3. Stem Type C .......................................... 60
   4. Stem Type D .......................................... 61
   5. Stem Type E .......................................... 61
   6. Discussion .......................................... 61
SECTION IV CONTROVERSIAL ALGAL FOSSILS

A. General

B. Algae from the Table Mountain Series
   1. cf. Tontalia zollneri Frenguelli
   2. Discussion and comparison
      (a) Tontalia zollneri from Argentina
      (b) Northern hemisphere Buthotrephis

C. Spirophyton or Zoophycus?
   1. Brief history and summary of the controversy
      (a) 1842-1895 a vegetable origin assumed
      (b) 1895 Invertebrate borings
      (c) 1903 Inorganic origin due to eddying water
      (d) 1903 Vegetable origin re-iterated in South Africa
      (e) 1954-1962 Invertebrate, probably worm-feeding burrows
      (f) Plant origin still favoured in South Africa
   2. Spirophyton in South Africa
      (a) Stratigraphical occurrence and environment
      (b) Biological associations
      (c) Mineral matrix
      (d) Appearance in the field
      (e) Geographical distribution and historical record
   3. Description of the specimens illustrated
      (a) Spirophyton Type ‘A’
      (b) Spirophyton Type ‘B’
      (c) Spirophyton Type ‘C’
      (d) Spirophyton Type ‘D’
   4. Summary of the Discussion on Origin of Spirophyton

SECTION V SUMMARY OF THE FOSSIL FLORA OF THE CAPE SYSTEM

A. Size of the Flora
B. Environment
C. Suggestions about the environment of Psilopsida
D. Composition of the Flora
E. Age
   1. Age based on fossil plants
   2. Table showing comparative ages
   3. Age based on fossil fish
F. Evolutionary significance
G. The Relationship between the fossil plants of the Cape System and other Devonian Floras
