DECLARATION

I declare this research report is my own unaided work

It is submitted in partial fulfillment of the Degree of Master of Science in Property Development and Management in the School of Construction Economics and Management, University of the Witwatersrand.

It has not been submitted before for any degree or examination in any other University.

ACKNOWLEDGEMENTS
I wish to forward my heartfelt gratitude to the almighty God for having given me the strength to pull through this one.

I would like to say many thanks to the following people without whose support this work would not have been a reality;

Firstly my parents Joel and Mathabang Rakoena. They stood by me and prayed for when the chips were really down. Secondly the unmeasured gratitude is forwarded to my Brother Thabiso, his wife Limpho Rakoena and her; Nthabiseng Mofana for their great support during a daunting task of primary data collection, not forgetting my cousin Katiso Mosaase who greatly assisted me in the task. ‘Together we walked the dusty streets of the study villages in Maseru in search for information’!

I would also like to thank my friend Matthew Smart who eliminated some “windy” English that characterized most parts of this document. ‘You are really smart man’! The list of people to be thanked is endless, however it would be great injustice not to thank the following; Lekhoa Rajake, Thabang Maharasoa, Thabiso Maboee, Mokela Nkokoto, Thabo Ntitsane, Makali Lekhotsa-Nathane.

Many thanks also to people at Nedbank, Lesotho Bank (1999) limited/Standard Bank as well as the Housing Department and Lands, Survey and Physical Planning Department in the Ministry of Local Government for affording me the interviews.

Very special gratitude goes to my supervisor, Bode Akindele, for leading me by the hand like a good manager. ‘Let us produce more term papers in future because the sky is the limit Sir’!

Abstract
Most governments in developing countries are unable to assist in the ever-growing housing needs of the informal sector, which constitutes the major part of most economies. The two reasons for this state of affairs are (i) the ever-shrinking resource base of countries, which makes the provision of subsidies impractical; and (ii) the fact that this sector is normally characterized by irregular incomes, which makes provision for loans by financial institutions difficult. This situation is particularly true for the Kingdom of Lesotho. Due to their unfortunate predicament, the informal sector has become innovative in addressing their housing needs. Various informal credit methods are widely employed to finance their houses, which are built progressively. This research therefore investigates the possibilities of linking the progressive housing investment to bank housing finance, using Maseru - Lesotho as the research focus.

In order to achieve the above aim, a household survey was conducted coupled with structured interviews. The structured interviews were held with the commercial banks as well as the government housing authorities. These interviews were mainly to elicit their views about the option of Microfinance of housing. It was established that the respondents as well as the government authorities were not aware of this option. The banks were equally unaware of it and in addition to this, the perceived risk led to skepticism. As such these made Microfinance of housing impractical in the short-run. However it would be advisable to mobilize the formation of a revolving fund to which the commercial banks could on-lend, as a solution to the lack of housing finance.

**Keywords:** Progressive Housing; Microfinance of housing; On-lend; informal savings association; Maseru.

METHODOLOGY OF RESEARCH

3.1. Introduction
3.2. Initial Observation of the Areas to be studied
3.3. Data and Information Sources relevant for the Study
3.4. Logistics for Conducting the Household Survey
3.5. Determination of the Sample Frame
3.6. Choosing the Appropriate Sample Size
3.7. Actual Data Collection
3.8. Structured Interviews
3.9. Justification for All Methods Applied in the Study
3.10. Presentation Of Data

DATA ANALYSIS AND INTERPRETATION

4.1. Introduction
4.2. Data Collection and the Response Rate
4.3. Demographic Characteristics of Respondents
4.3.1. Analysis of the Demographic Variables of the Three Villages
4.4. Description of the Three Villages Geographically
4.5. Evaluating the Extent to Which the Availability of Credit affects the Pace of Construction in the Three Villages Studied
4.6. Evaluating the Views of People especially the Low-Income Groups to Microfinance of Housing
4.7. Evaluating the Extent to which the Banks Are Accommodative of the Microfinance of Housing as a Viable Option for Limited Incomes in Lesotho
4.8. Land Administration Problems to the Process of Housing
4.9. The Role of Government in the Provision of Housing
4.10. Peoples Initiatives towards Shelter Delivery
5. CONCLUDING REMARKS AND RECOMMENDATIONS ..........64

5.1 Concluding Remarks ...........................................64
5.2 Recommendations ..............................................68

LIST OF FIGURES

4.1 Ha Tsolo – Levels of Education against Income Levels of Respondents
4.2 Ha Matala – Levels of Education against Income Levels of Respondents
4.3 Ha Foso – Levels of Education against Income Levels of Respondents
4.4 Pictorial View of Ha Tsolo Settlement, Sealong. (A House Built Incrementally)
4.5 Panoramic View of Ha Matala Phase I & II.
4.6 Type of Landscape of Ha Foso Settlement
4.7 Participation of Respondents in Informal Savings Associations across the Three Villages

LIST OF TABLES

4.1 Respondents relative to the Three Villages
4.2 Age Groups of Respondents relative to the Three Villages
4.3 Distribution of Type of Dwellings relative to the Three Villages

4.4 Education Levels vs Income Levels of Respondents

4.5 Income Levels vs Monthly Investments on Construction of Respondents

4.6 Types of Employment vs Income Levels relative to the Three Villages

4.7 Delays in Construction of Dwellings relative to the Three Villages

4.8 Experienced delays in construction vs availability of formal credit relative to the Three Villages

4.9 Attitudes of Respondents towards Bank Loans relative to the Three Villages

4.10 Percentage of Bank Account Holders relative to the Three Villages

4.11 Participation Level in Informal Savings Associations

4.12 Attitudes of Respondents towards Informal Savings Associations

4.13 Interest Rate Level in Informal Savings Associations relative to the Three Villages

4.14 Types of Tenure held by Respondents relative to the Three Villages
