CHANGING PLACES, SPACES AND IDENTITY
IN THE SHASHE - LIMPOPO REGION OF
LIMPOPO PROVINCE, SOUTH AFRICA

Sunset over the Limpopo River

Bronwen Louelle van Doornum

A thesis submitted to the Faculty of Science, University of the Witwatersrand, Johannesburg, in fulfillment of the requirements for the degree of Doctor of Philosophy.

Johannesburg, 2005
Declaration

I declare that this thesis is my own, unaided work. It has been submitted for the Degree of Doctor of Philosophy in the University of the Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination in any other University.

ABSTRACT

While the Iron Age sequence of the Shashe-Limpopo region of Limpopo Province has been the subject of much research in the past, little is known about the hunter-gatherer sequence of the area. I begin to address this lack through the description of three new hunter-gatherer sites: Tshisiku Shelter, Balerno Main Shelter and Balerno Shelter 2. I examine how hunter-gatherer spaces, places and identity changed with the movement of different groups of farmers (including Zhizo, K2 and Mapungubwe period farmers) into the Shashe-Limpopo region over the last 2000 years. I also investigate how hunter-gatherer / farmer proximity impacted on interaction, and what social structures, boundaries, and constructed identities underlie interaction in the region.

The pre-contact and contact periods are compared in order to determine whether changes in the hunter-gatherer sequence were due to the arrival, and continued presence, of farmers. Ethnographic and archaeological interaction case studies are used to construct a model of interaction for the Shashe-Limpopo.

Based on data from Tshisiku Shelter, Balerno Main Shelter, Balerno Shelters 2 and 3, and Little Muck Shelter, a new sequence is proposed for hunter-gatherer occupation in the Shashe-Limpopo region:

- An early pre-contact phase (11 120 – 10 890 BC; 6000 – 1220 BC)
- A late pre-contact phase (1220 BC - AD 100)
- An early contact phase (AD 100 – AD 900)
- A late contact phase divided into two periods:
  - The Zhizo period (AD 900 – AD 1000 / 1200)
  - The K2 / Mapungubwe period (AD 1000 – AD 1300)

Finally, a late second millennium phase of Late Iron Age farmer utilisation of hunter- gatherer sites occurs in the recent past (AD 1600 – AD 1900).
My research suggests that:

- A hunter-gatherer presence occurs significantly earlier in the region than initially hypothesised.

- Differences in farmer social structure and identity play a role in how farmers interact with hunter-gatherers, and *vice versa*.

- Finally, due to the differences between farmer groups and decreasing space on the landscape, a range of hunter-gatherer reactions to the presence of farmers occurred throughout the last two millennia in the Shashe-Limpopo region.
For my grandparents

Elaine Dorothy (Dot) Jeanne Dalgety & John (Jack) Stewart Dalgety

and

Johanna (Joop) Christina van Doornum & Gerhardt Wilhelm Anton van Doornum

And in memory of

My uncle,
John Stewart Dalgety
(2/6/1941 – 9/7/2004)

and

My aunt,
Elisabeth (Els) Dowsing (née van Doornum)
ACKNOWLEDGEMENTS

I would like to thank Lyn Wadley for her encouragement, time and advice, without which completing this thesis would have been far more difficult. I am most grateful to Simon Hall, Karim Sadr and Alex Schoeman for their comments and discussions on sections of the thesis; to Wendy Voorvelt for the lithic illustrations and maps, and for her assistance with the section drawings; to Job Kibii for the analysis of the faunal assemblages; to Chet Cain for advice on the interpretation of the faunal assemblages; and to Tom Huffman for granting me permission to use his Shashe-Limpopo site distribution maps.

My thanks also go to all those who assisted me with my excavations at Balerno Shelter 2: Lindsay Marshall (nee Farrell), Udo Kieslich, Wendy Wilson, Marilee Wood; Balerno Main Shelter: Simon Hall and his UCT students; and Tshisiku Shelter: Lucy Allott, Wendy Voorvelt and Christian Gotschi.

Thanks go to my fellow PhD students, Lucy Allott, David Pearce and Alex Schoeman, for their friendship, jokes, discussions and advice. To Gavin Whitelaw, Joané Swart, Marlize Lombard, Penny Letley and Linda Ireland at the Natal Museum, and to all my other friends - many thanks for your encouragement and support.

I would also like to thank the University of the Witwatersrand, the Swan Fund (Pitt-Rivers Museum, Oxford) and the Skye Foundation for the funding that I received for this research.

Finally, special thanks go to my parents, and to the rest of my family, for their support, enthusiasm, help, patience and teasing throughout the years.
