

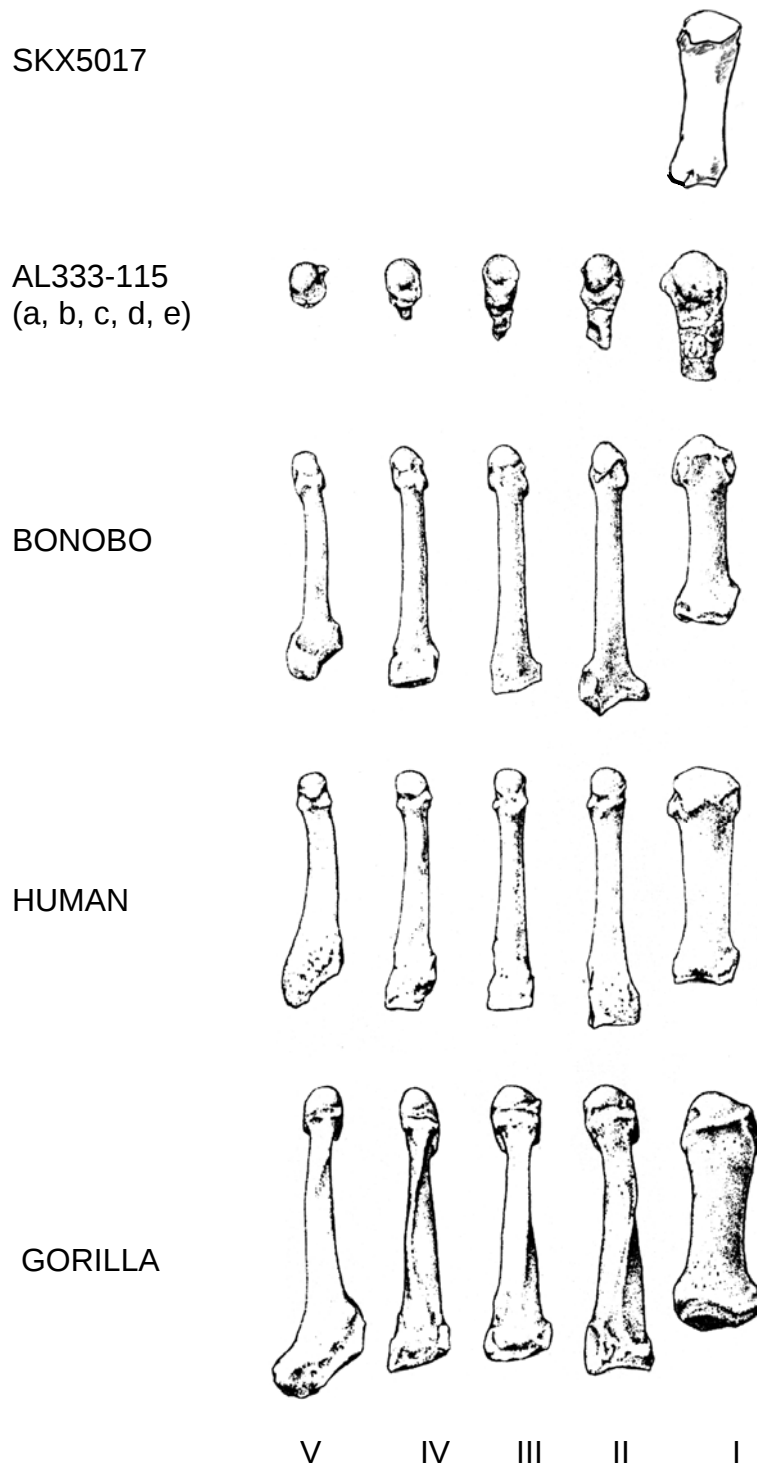

Figure 1.5: Dorsal view of the metatarsal heads I – V (from right to left) in SKX 5017, A.L. 333 – 115, bonobo, modern human, and gorilla. Metatarsal head I in humans is unique among the hominoids in having a relatively flat contour from side to side, while in the apes and fossils the same surface is highly convex. Adapted from Susman *et al.*, (1984).
