Mediated Learning Experience

As an Alternative Approach to Assessment

JOSEPH MAHLAKANE SEABI

A Research Report Submitted to the Discipline of Psychology,
The School of Human and Community Development,
University of the Witwatersrand,
In Partial Fulfilment of the Requirements
For the Degree of Master of Education (Educational Psychology)

February 2007
II

DECLARATION

I declare that this research report is my own, unaided work. It is being submitted for the degree of Master of Education (Educational Psychology) at the University of the Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination in any other university.

Joseph Mahlakane Seabi

DEDICATION

In loving memory to my granny, Hellen Lekganyane,

Who never ceased to believe in me,

Whose interest, inspiration, and support made it possible.
ACKNOWLEDGEMENTS

I am indebted to the following people for their assistance and I wish to express my sincere thanks to them for their contributions to this project:

Dr. Zaytoon Amod, my research supervisor, for her wonderful guidance and assistance.

Dawn Snell, my co-supervisor, for her excellent supervision, interest, capacity to share her knowledge and expertise.

Lesley Rosenthal, for giving me the opportunity to undertake this study and for all her support and assistance.

Peter Fridjhon, for his invaluable statistical and research advice.

Ms. Jones, the principal and the teachers of Crossroads Remedial School, whose cooperation made this research study possible.

All the learners at Crossroads Remedial School for their enthusiastic participation in this study.

Kim Fairon and Kathy Krishnan, for their friendship, continuous encouragement and their unwavering support.
We should spend less time ranking children and more time helping them to identify their natural competencies and gifts and cultivate these. There are hundreds and hundreds of ways to succeed and many, many different abilities that will help you get there.

-Howard Gardner
ABSTRACT
This study investigated the effectiveness of Feuerstein’s mediated intervention programme on a sample of the Grade Five population, in a remedial school. The participants (n=20) were systematically sampled and they constituted two groups, namely, Individual Mediation (n=10) and Group Mediation (n=10). It was hypothesised that participants exposed to this programme would yield significant improvement in cognitive functioning as measured by the (Raven’s Coloured Progressive Matrices (RCPM). As a result of the intensity and the duration of the mediation that was provided to the participants within the Individual Mediation, it was hypothesised that they would perform significantly better than those within the Group Mediation. Set Variations B-8 to B-12 from Feuerstein’s Learning Potential Assessment Device served as vehicle for mediating cognitive deficiencies. Following the intervention, a significant improvement on the RCPM was only obtained within the Individual Mediation. Although there was significant improvement, no significant difference was found between the Individual Mediation and the Group Mediation. The pre-post-test results of the Individual Mediation corroborate existing literature that provision of adequate and appropriate mediated learning experience is effective in improving cognitive functioning. However, non-significant results between the two groups suggest that a pre-post significant finding within the Individual Mediation was as an effect of pre-test differences. These findings are therefore inconclusive. It might be helpful to further replicate this investigation in order to determine whether support is found for the previous or for the present findings.

Key words:
Dynamic Assessment, Mediated Learning Experience, Learning Potential Assessment Device, cognitive functions.

## CHAPTER ONE: INTRODUCTION

1

## CHAPTER TWO: LITERATURE REVIEW

9

2.1 Dynamic assessment versus static assessment 9

2.2 Development of Alternative Assessment Approaches 11

2.3 Theory of the LPAD 14

2.4 Application of the LPAD 20

2.5 Limitations of the LPAD and its theory 26

## CHAPTER THREE: METHODOLOGY

28

3.1 Context of the Study 28

3.2 Rationale 28

3.3 Aims of the Study 29

3.4 Hypotheses 30

3.5 Research Design 30

3.5.1 Sampling Procedure 32

3.5.2 Participants 32

3.5.3 Experimental Design 33

3.5.4 Testing and Intervention Procedure 33

3.5.5 Data Analysis 36

3.6 Instrumentation 37

3.6.1 *The Raven’s Coloured Progressive Matrices (RCPM)* 37

3.6.2 *Learning Potential Assessment Device (LPAD)*
LIST OF TABLES

Table 1.1: Demographic Information about the Sample 41
Table 1.2: Mean Scores of the RCPM by Mediation Condition 41
Table 1.3: Results of the paired t-tests within each group on the RCPM 42
Table 1.4: Comparison of the effects of Individual Mediation and Group Mediation 43

LIST OF FIGURES

Figure 1: Overview of the Research Design 31

GLOSSARY OF TERMS

*Mediated Learning Experience* is defined as the “interactional processes between the developing human organism and an experienced, intentioned adult who, by interposing himself between the child and external sources of stimulation, mediates the world to the child by framing, selecting, focusing and feeding back environmental experiences in such a way as to produce in him appropriate learning sets and habits” (Feuerstein, 1979).

*Dynamic assessment* is an interactive approach to psycho-educational assessment that follows a test-intervene-retest format, which focuses on learning assessment and intervention.

*Cognitive functioning* is defined as the capacity of an individual to use previous experience in his/her adaptation to new situations, and the ability to plan and structure behaviour effectively for goal attainment.
