School of Human and Community Development

Faculty of Humanities

University of the Witwatersrand

In fulfilment of the requirements for the degree Masters of Social Work by

Elvis T. Munatswa

Declaration

I declare that this research project is my own work. It is being submitted in fulfilment of the requirements of the Degree Masters of Social Work by Research. The research has not been submitted before any degree or examination in any other universities and all references have been duly acknowledged.

Elvis Tichaona Munatswa

Date

Dedication

I dedicate this work to my late brother Irvine. Your passing away was a great pain to me and a source of inspiration to do this thesis, regardless of the numerous setbacks.

Acknowledgements

I would like to express my sincere gratitude to:

- * Grace Khunou (PhD), my supervisor, for all the support, guidance, encouragement, advice and patience
- * Elna McIntosh (PhD) for the numerous opportunities she afforded me, plus great encouragement
- * All the participants who offered their time to participate in this research
- * My siblings for the social support and encouragement
- * My friends and colleagues

Thank you all for the support you have given me unconditionally.

Abstract

Men are often characterised by a general unwillingness to seek help when experiencing problems in life. Popular stereotypes portray men's reluctance to ask for direction when they are lost, having difficulty sharing vulnerable feelings with friends, and avoiding seeking help from professionals. These stereotypes raise an important question of whether men are able to take care of their health; that is, reporting and subsequently seeking early treatment for chronic diseases. This study therefore inquired into men's perceptions on reporting and getting treated for prostate cancer as well as the change in their identities upon treatment. The study adopted a qualitative approach and explored men's health help-seeking practices through in-depth interviews. Twenty male participants in Gauteng were recruited for the study via purposive sampling. The data collected were analysed using thematic content analysis. Findings from this study point out the complexities in men's health practices and the eminent threat to manliness that often goes unabated, reducing men's choices to disregard their sexuality over surgery. Findings from the study continue to point out other things that have somewhat been ignored in literature. For instance, the type of disease or condition influences whether it is to be reported or not. In this case, diseases of a sexual nature carry a lot of stigma, compounded by the attitude of nursing staff in public health facilities, men choose to only seek help when they have no choice. The ramifications often go beyond personal into interpersonal relationships and therefore it is useful for social work professionals to integrate understanding of masculine norms and stereotypes into an analysis of men's use of health services.

Key words: Masculinities, men's health, health-seeking behaviour, prostate cancer

Table of contents

Contents	Page
Declaration	i
Dedication	ii
Acknowledgements	iii
Abstract	iv
Chapter 1: Background of study	
1.1 Introduction	1
1.2 Research questions	5
1.3 Aim of the study	5
1.4 Objectives of the study	5
1.5 Brief chapter synopsis	6
Chapter 2: Literature Review	
2.1 Introduction	9
2.2 Masculinity and Health	9
2.3 Masculinity and health help-seeking behaviour	14
2.4 The genesis of men's health practices in Africa	17

2.5 Defining men's health	20
2.6 Masculinities and prostate cancer	23
2.7 The status of men's sexual health	25
2.8 Theoretical framework: Person-in-situation	30

Chapter 3: Research Design and Methodology

3.1 Introduction	33
3.2 Research Design	33
3.3 Population and Sampling Procedures	34
3.3.1 Population	34
3.3.2 Sampling	36
3.4 Pretesting the interview	38
3.5 Research site	38
3.6 Data collection	39
3.7 Data analysis	48
3.8 Ethical Consideration: Experiences from the field	49
3.9 Strengths & Limitations	51

Chapter 4: Pathogenesis of prostate cancer

4.1 What is Prostate cancer?	53
4.2 Signs and symptoms	53
4.3 Tests to Identify Prostate Cancer Stage	55
4.4 Reactions to diagnosis methods	56
4.5 Prostate cancer treatment	57
4.6 Major issues in prostate cancer treatment	62

Chapter 5: Complexities pertaining to the diagnosis of prostate cancer.

5.1 Introduction	67
5.2 Context	68
5.3 Treatment/ management of prostate cancer become very expensive.	72
5.4 Limited awareness of the disease	74
5.5 Prostate Cancer Management and Dying	79
5.6 Conclusion	83

Chapter 6: Psychological Effects of Prostate Cancer on Survivors

6.1 Introduction	85
6.2 Fear and anxiety at initial diagnosis	85
6.3 Depression and delayed treatment	90

6.4 Reactions to prostate cancer treatment	96
6.5 Conclusion	109
Chapter 7: Conclusion and Recommendations	
7.1 Conclusions	111
7.2 Recommendations	115
7.3 Recommendations for further research	116
