ABSTRACT

The morale of soldiers of the South African Infantry Formation has attracted much attention from various stakeholders for various reasons since the year 2000. Leadership has in most of the occasions if not all, intervened but it seems that the responses have not managed to achieve the outcomes as intended. Morale is a fluid and tri-dimensional construct whose resolve demands an all-inclusive approach rather than a one-dimensional approach. The purpose of this research was to conduct a quantitative research study in the form of surveys by individual questionnaires to investigate the trends and factors of morale in order to come up with strategies for leadership to uplift and maintain morale. These questionnaires were self-administered to one hundred and ninety four serving members or regular force individuals from both 4 and 7 SAI Bn. With all the interventions and the exposure that these enjoys, their morale levels seems questionable and diverse as a result of inherent factors attached to age, educational qualifications, former force, gender, race and rank. It is quite obvious that such factors were overlooked and therefore the researcher had tried to tackle them within the confines of this report.
DECLARATION

I declare that this report is my own, unaided work. It is submitted in partial fulfilment of the requirements of the degree of Master of Management (in the field of security) in the University of Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination in any other university.

DEDICATION

I dedicate this research report firstly to my God and my parents who moulded me to be the person I am today. I also dedicate it to my beloved partner and closest friend Theresa and the children we are blessed with, for their support, patience and belief in me throughout my study journey. To my colleagues and supervisor at work, who had to sometimes stand in for me during the period of absences from work, I say to them that this would have been impossible without you all. To all members of Joint Operations Division, the SA Army Infantry Formation, the South African Army and the South African National Defence Force in general, I say thank you very much.
ACKNOWLEDGEMENTS

To my supervisor Dr Johny Matshabaphala, who besides his tight schedule accepted to take the responsibility of supervising and mentoring me in this project, thanks very much. Without your guidance and valuable support this research endeavour would have been just a nightmare. The same appreciation and thanks goes to his secretary Ms Mankosana Mngomezulu. It will be wrong if the same does not go to the following people who directly or indirectly played a role in the driving of this research project. Ms Gloria Mogale, Ms Helen Mzileni, Dr Kambidima Wotela, Prof Alex van den Heever, Ms Bongiwe Msweli, Ms Kgomotso Malahle, Ms Jenny Mgolodela and their support staff. To all the lecturers of the Graduate School of Public and Development Management, colleagues and friends, thanks very much.
