Fig. 2.26: (a) Photograph of the entire outcrop of location 2 (see Appendix No. 6) in the northwestern part of the collar to the left of Fig. 2.25. This outcrop is divided into horses by shear planes (dashed lines). Width of outcrop shown ca. 45 m. (b) Lower hemisphere equal area stereographic projection (Schmidt net) of the poles to the shear planes (triangles) and great circles, bedding (bold) and fractures. The average bedding orientation at this location is marked with a bold cross and a bold great circle, and the orientation of fractures is indicated by great circles.
