

Profound observation by one of our budding anthropologists:—

“The anterior border of the tibia runs along the front of the bone. To the lateral side of the anterior border is the lateral surface of the bone.”

Student (taking history in O.P.D.): “What are you complaining of?”

Patient: “Doctor said as 'ow I 'ad perpendicular adhesions.”

New method of dealing with a case of D.T.'s devised by one of our housemen:—

Give Pot. brom. and Chloral to all the other patients in the ward so that they will have an undisturbed night.

The Art of Answering

Chief (discussing a swelling): “Fluid in this swelling—yes or no?”

Student: “Well, sir, if you ask me whether there is fluid in this swelling or not, I answer that it is soft and therefore there is fluid in it, but on the other hand there may not be any fluid there.”

Extract of Minutes of *Leech* Committee:

“Agreed that a sub-committee be formed for the purpose of *constructing* borborygmi.”

We had previously been under the impression that these things merely happened.

Great thought from a report in the *Rand Daily Mail* of 11/4/34:—

“Epileptics are a tremendous danger. . . . When they are in this clouded state of mind to which they are subject, they can commit any kind of crime. *If there was a colony for them they could be employed and would set an example to the Government.*”
