

## LIST OF FIGURES

FIGURE	PAGE
2.1 Strain versus time schematic representation of Creep Curve with basic creep regions under constant load	11
2.2 Deformation mechanisms maps at different stresses and temperature	34
3.1 Schematic diagram of test specimen	63
3.2 Lloyd Machine with auxiliary components including a desktop Computer	65
3.3 Set –up of creep machine showing the Denison T48	68
3.6 Schematic view of the LVDT arrangement on the Denison machine	71
4.1.1 Strain rate versus yield stress at different temperatures and strain rates	73
4.1.2 Strain rate plotted against tensile yield for specimen tested at strain rates and temperatures having yield stress above 550MPa.	74
4.1.3 Behaviour of material state stress for specimens aged at different times and temperatures	76
4.1.4a Experimental stress-strain curves for two sets of creep and tensile specimens under similar conditions	79
4.1.4b Softening curves for specimens aged in the furnace and interrupted creep tests	79
4.1.5 Yield stress versus strain rates at different temperatures	81
4.1.6 Creep results for temperature of 564°C	82
4.1.7 Creep results for temperature of 582°C	82
4.1.8 Creep results for temperature of 603°C	83
4.1.9 Creep results for temperature of 620°C	83

5.2	Strain rates plotted against tensile yield in terms of glide equations	102
5.3	Strain rate plotted against tensile yield in terms of power law breakdown	103
5.4	Values of material state stress	106
5.5	Softening curves of the material state stress against time for specimens aged in a furnace and from Interrupted creep tests	107
5.6	Experimental and calculated creep results for a four sets Temperatures (a) 564oC,(b) 582°C, (c)603°C and (d)620°C	109

## LIST OF TABLES

Table 2	Characterization of Obstacle Strength	21
Table 3.1	Chemical Analysis of 709 M 40 steel by wt%	62
Table 3.2	Test data to determine the effect on activation energy	64
Table 3.3	Data for the determination of the effect of creep on softening	68
