Seismotectonic Models, Earthquake Recurrence and Maximum Possible Earthquake Magnitudes for South Africa

Mayshree Bejaichund

Dissertation submitted to the Faculty of Science, University of Witwatersrand, Johannesburg in fulfillment of the requirements for the degree of Master of Science

Supervisors

Professor Raymond Durrheim, University of the Witwatersrand
Professor Andrzej Kijko, University of Pretoria

17 September 2010

Keywords: seismic hazard, South Africa, seismotectonic, maximum earthquake

Declaration

I declare that this dissertation is my own, unaided work. It is being submitted for the Degree of Master of Science in the University of the Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination in any other University.

Contents

EXECUTIVE SUMMARY i

Part 1 Seismotectonic Models for South Africa: Synthesis of Geoscientific Information, Problems, and the Way Forward

Introduction 1-1
Earthquake Catalog 1-3
South African National Seismological Database 1-3
Seismicity Clusters 1-3
Largest Earthquakes 1-5
Mining-related Events 1-6
Assessment of the Earthquake Catalog 1-7
Geological Provinces and Geophysical Observations 1-7
Topography and Major Geological Provinces 1-8
Geophysical Observations and Subsurface Geology 1-10
Geodynamics: African Plate Motion and Regional Stress Regimes 1-12
Quaternary Faults, Seismotectonic Faults, and Neotectonic Activity 1-12
Conclusions 1-14
Acknowledgments 1-15
References 1-15

Part 2 Collection of isoseismal maps for South Africa

Introduction 2-1
Background 2-1
Review Of Similar Collections 2-2
Use and Potential of the Map Collection 2-2
Compilation Procedure 2-3

Final Maps 2-3
References 2-9
Appendix 2-11

Part 3 First Order Regional Seismotectonic Model for South Africa
Introduction 3-1
Methodology 3-3
STAGE 1: Collection and selection of base data 3-3
STAGE 2: Assessment of data quality and usefulness 3-4
STAGE 3 Data Assimilation, Interpretation and Construction of Schema 3-5
STAGE 4 Interpretation and Synthesis: Seismotectonic Zonation 3-10
Results and Discussions 3-13
References 3-14
Acknowledgements 3-17

Part 4 Earthquake recurrence parameters and maximum possible earthquake magnitudes
Introduction 4-1
Methodology 4-3
Classical Maximum Likelihood Estimate Method 4-5
The L_1-Norm Regression Analysis 4-6
The L_2-Norm Regression Analysis 4-7
Results and Discussions 4-7
Data 4-7
Maximum observed earthquake magnitude 4-8
Interpretation of the *b*-value 4-9
Mean recurrence time 4-9
Comparison of methods to model the frequency-magnitude statistics 4-11

Conclusions 4-11
References 4-12
Acknowledgements 4-13
Appendix 4-21

Part 5 Conclusions

Part 6 Appendix - Preprints
