

**The prevalence of alcohol and other drug use amongst
school learners in Alexandra Township.**

Submitted by: Malose Langa

Supervisor : Kenneth Wilson

Dissertation submitted to the School of Human and Community
Development, University of Witwatersrand, in partial fulfillment of the
requirements for the Degree of Masters of Arts (Community-Based
Counseling Psychology)

Declaration

I declare that this dissertation is my own work. It is being submitted for the Degree of Masters of Arts (Community-Based Counseling psychology) at the University of Witwatersrand. It has not been submitted before for any degree or examination in any other University.

_____ Day of _____ 2004.

Acknowledgements

I wish to express my gratitude and thanks to the following people for their gracious assistance during my research:

- My Supervisor, **Kenneth Wilson** for his time, patience, guidance and insight during my research.
- The principal and school learners at the school where the research was undertaken. Special thanks to **Mrs. Letlabika** for your help and organizing school learners to participate in this research project.
- **Serame Masitha** for his patience and support during the statistical analysis phase of my research.
- My aunt **Totone** and flat mate **Chris** for their emotional support during the writing of this research report.

Abstract

The aim of this study was to investigate the prevalence of alcohol and other drug use amongst school learners in Alexandra Township. The participants in this study were 118 school learners in Alexandra Township. Of these 44 (40%) were in grade 9, 37 (32.2%) in grade 10 and 32 (27.8%) in grade 11; 55 (46.6%) were males and 63 (53.4%) were females; 50.4% were aged between 14—16, while 49.5% were aged between 17-20 years. Data was collected by means of a questionnaire, mostly requiring 'yes' or 'no' answers to determine use of various substances, the age of first use and the frequency use of these substances. This questionnaire has been used in other local studies and translated from English into Sesotho to maximize the validity of responses. The findings of this study indicate that in the past month the prevalence of 54.5% of males and 38.4% of females smoked cigarettes; 49.1% of males and 39.1% of females drank alcohol; and 36% of males and 12.6% of females smoked dagga. The everyday use of cigarettes was 41.7% for females and 47.2% for males; 7.2% of males and 3.6% females for alcohol; and 29.9% of males and 6.3 % for dagga. The results showed that there were no significant age and gender differences regarding the use of these drugs, except for dagga ($X^2=.005$), with more males than females reported the use. It seems that the everyday use of alcohol, tobacco and dagga is very common than the use of other illicit drugs. Mental health workers should take note of the above findings while planning preventative strategies for the reduction of everyday dagga use, daily cigarette smoking and drinking of alcohol. The results are also important for those involved in treatment programmes to assist these school learners before they progress into more other serious drugs such as ecstasy, LSD, Crack cocaine and heroin.

Table of contents

Chapter 1

1. Introduction and Aims of study	1
---	---

Chapter2

2. Rationale	3
--------------------	---

Chapter 3: Literature review

3.1. Drugs.....	6
3.2. Drug use	6
3.3. Drug abuse	7
3.4. Drug dependence	8
3.5. Drugs in the study	11
3.6. Global trends in the use of alcohol and other drugs.....	18
3.7. Theories of alcohol and other drugs use	
3.7.1. Disease model	32
3.7.2. Biological perspective.....	34
3.7.3. Psychoanalytic perspective	35
3.7.4. Stress theory.....	36
3.7.5. Problem-behaviour theory	37
3.7.6. Sociological theory	38
3.7.7. Family system perspective.....	39
3.7.8. Social learning theory	41
3.7.9. Developmental perspective.....	43

Chapter 4: Research design and methodology

4.1. Participants.....	45
4.2. Instrument	46
4.3. Piloting of the instrument.....	47
4.4. Procedure and ethical issues	48
4.5. Data analysis	49

Chapter 5: Results

5.1. Demographic statistics	50
5.2. Use of substances by gender	51
5.3. Age of first use of substances	54

5.4. Frequency of use of substances by gender.....	56
--	----

Chapter 6: Discussion

6.1. Alcohol use	58
6.2. Frequency of use of alcohol.....	59
6.3. Age of first use of alcohol.....	60
6.4. Tobacco use	62
6.5. Frequency of use of tobacco	63
6.6. Marijuana use.....	65
6.7. Frequency of use of marijuana	66
6.8. Age of first use of marijuana	67
6.9. Is Marijuana a “gateway drug?”	67
6.10. Other illicit drugs	68
6.11. Limitations of the study	73

Chapter 7: Implications and future research

7.1. Research implications	76
7.2. Practical implications.....	77
7.3. Clinical implications	79
7.4. Educational implications.....	80
7.5. Policy interventions	81
7.6. Community implications.....	82
7.7. Future research topics	83
8. Conclusion	84
