1 INTRODUCTION	1
1.1 The conservation importance of the Nylsvlei floodplain	1
1.2 The flooding regime of the Nylsvlei floodplain	2
1.3 Location and description of the Nylsvlei floodplain	3
1.4 Climate of the Nylsvlei floodplain	5
1.5 Vegetation of the Nylsvlei Floodplain	6
1.6 Past and future developmental threats to the Nylsvlei floodplain	8
1.7 The hydrologic and hydraulic study of the behaviour of the Nylsvlei floodplain	12
1.8 Summary	15
1.9 Dissertation preview	16
2 REVIEW OF HYDRAULIC MODELLING METHODS IN WETLANDS AND FLOODPLAINS	20
2.1 Why develop a model?	20
2.2 The choice of a modelling method for the Nylsvlei floodplain	22
2.3 Review of previous attempts to model the hydraulics of the Nylsvlei floodplain	24
2.3.1 DWAF model of the Nyl River basin	25
2.3.2 SRK model of the Mogalakwena River basin	26
2.3.3 A mass-balance model of the Nylsvlei floodplain	27

2.4	Review of a few similar projects in other wetlands and floodplains	30
2.4.1	Hydraulic models of three floodplains in South Africa (Weiss, 1976)	30
2.4.2	One-dimensional model of the Porter Ranch wetland, Michigan, USA (Hammer and Kadlec, 1986)	32
2.4.3	A water balance model of the Hadejia-Nguru wetlands, Nigeria (Thompson & Hollis, 1995)	32
2.4.4	WETFLOW (Feng and Molz, 1997)	33
2.4.5	RBFVMD-2D (Zhao <i>et al</i> , 1994)	34
2.4.6	Modelling the River Culm, UK, using RMA-2 (Bates <i>et al</i> , 1992; Anderson and Bates, 1994)	35
2.4.7	Modelling the River Culm, UK, using a two-dimensional finite-difference model (Nicholas and Walling, 1998)	36
2.4.8	Modelling the Waihao River floodplain, New Zealand, using Hydro2de, a two-dimensional finite volume approach and MIKE11, a one-dimensional model (Beffa and Connell, 2001; Connell <i>et al</i> , 2001)	38
2.4.9	The Okavango Delta, Botswana (Dincer <i>et al</i> , 1987)	39
2.4.10	Rule-based modelling methods	41
2.5	HEC-RAS	42
2.6	Summary	44
3	DATA COLLECTION AND SURVEY	46
3.1	Introduction	46
3.2	Gauge plate installation, survey and stage data collection	46
3.3	Collection of discharge and rating data	51
3.4	Analysis of observed flow and stage data	54
3.5	Rainfall	56
3.6	Survey of the floodplain using laser scanning and aerial photography	57
3.7	Summary	62
4	EVAPOTRANSPIRATION LOSSES FROM THE NYLSVLEI FLOODPLAIN	63

4.1	Introduction	63
4.2	Methods to determine potential evapotranspiration	65
4.2.1	Climatological models	65
4.2.2	Micrometeorological methods	69
4.2.3	Direct measurements	72
4.3	Methods to determine actual evapotranspiration	74
4.3.1	The surface energy balance method	75
4.3.2	Leaf area indices	81
4.3.3	Study by Sanchez-Carrillo <i>et al</i> (2001) of evapotranspiration from a wetland	81
4.4	Previous studies of evapotranspiration at Nylsvlei	82
4.4.1	Study of evapotranspiration on the floodplain at the Nylsvley Reserve using an energy balance	83
4.4.2	Moore's study of evapotranspiration in the savanna at the Nylsvley Reserve	87
4.5	Average monthly evapotranspiration rates for the Nylsvlei floodplain	87
4.6	Comparison of evapotranspiration rates derived from energy balance measurements at the Nylsvley Reserve with some empirical and pan methods	92
4.6.1	Empirical methods	92
4.6.2	Pan methods	93
4.7	Recommended evapotranspiration rates for the Nylsvlei floodplain	95
4.8	Summary	95
5	INFILTRATION LOSSES FROM THE NYLSVLEI FLOODPLAIN	97
5.1	Introduction	97
5.2	Methods of measuring infiltration	103
5.2.1	Ponded infiltrometers	103
5.2.2	The Guelph Permeameter	104
5.2.3	Other study methods	110
5.3	Previous studies of infiltration at Nylsvlei	110

5.4	Fieldwork at the Nylsvley Nature Reserve during 2002	113
5.5	Recommended infiltration rate for the Nylsvlei floodplain	121
5.6	Summary	122
6	MODEL DEVELOPMENT	123
6.1	Introduction	123
6.2	The hydrological model	123
6.3	Introduction to the hydraulic model	127
6.4	Drawing a contour map using Quicksurf	129
6.5	Positioning and extracting cross-sections using RiverCAD	136
6.6	Unsteady hydraulic modelling using HEC-RAS	140
6.7	Predicting inundation surface areas	144
6.8	Water balance of the Nyl River floodplain	146
6.9	Calibration of the model	150
6.9.1	Initial attempts at calibration	151
6.9.2	Final calibration	152
6.9.3	Manning's resistances in the Middelfontein reach	153
6.10	Discussion of the calibration and verification of the model	154
6.11	Application of the model	159
6.12	Summary	164
7	DEVELOPMENT OF CATCHMENT SCENARIOS	166
7.1	Introduction	166
7.2	Virgin catchment scenario	166
7.3	Historical catchment scenario	167
7.4	Olifantspruit Dam with constant 30 l/s environmental flow release catchment scenario	167
7.5	Olifantspruit Dam with IFR flow release catchment scenario	171
7.5.1	Introduction	171
7.5.2	Background	171
7.5.3	The duration of the peak IFR flow release and its effect on inundation of the Nylsvlei floodplain	174
7.5.4	Results	177
7.5.5	Maintenance high flow IFR release period for the scenario	182

	7.6	No flow from the Olifantspruit scenario	182
	7.7	Summary	183
8		CATCHMENT SCENARIOS APPLICATION AND BIOTIC LINKS	184
	8.1	Introduction	184
	8.2	Determination of appropriate model resolutions and development of biotic links with wild rice	184
	8.3	Comparison of stream hydrographs and inundated areas with Tarboton's observations	188
	8.4	Scenario predictions for temporal occurrence of inundation in the Nylsvley Reserve reach	193
	8.5	Scenario predictions for inundation areas of the duration preferred by wild rice	196
	8.6	Scenario predictions for temporal occurrence of inundation areas of duration preferred by wild rice	200
	8.7	Scenario predictions for inundation areas of duration and depth preferred by wild rice and their temporal occurrences in the Nylsvley Reserve reach	203
	8.8	Summary	209
9		CONCLUSIONS AND RECOMMENDATIONS FOR FURTHER RESEARCH	210
	9.1	Conclusions	210
	9.2	Recommendations for further research	213
10		REFERENCES	215
11		APPENDIX A: Infiltration data collected on the floodplain in the Nylsvley Reserve during October and November 2002	224
12		APPENDIX B: Results of the analysis of inundation areas for different scenarios in terms of the depth and duration requirements for wild rice	230
13		APPENDIX C: Example of a flood inundation map drawn with RiverCAD	236
