ACKNOWLEDGEMENTS

I would like to express my utmost gratitude to my supervisors, Professor Iakovos Sigalas and Doctor Mathias Herrmann, for their unwavering and patient support throughout this work. Professor Sigalas for his humanity and sensitivity to my personal hiccups, it's been a blessing to work with you. My Spaniard supervisor in the study of wetting behavior, Dr Muguel Angel Rodriguez, what a star you are! Thank you, for everything. My friends and colleagues in Spain, I love you all. My friends and colleagues in South Africa, thank you all.

My chief project, my beloved daughter Gaopalelwe Keoratile Leuta, you have been the invincible summer during my winters, the honey to the occasional dregs in my cup, no frets about not delivering this on time for with you I have learned what this PHD would never have taught me.

My partner Balebetse Leuta, I cannot find the words, but you know better than everyone else and that is all that matters.
