|                                                                                                                                                                                                                                                  |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Table 3.1: Parameter estimates under the various covariance structures or reasons for exclusion from simulation study. Estimates from successfully fitted models were used to generate the simulated data.....                                   | 70 |
| Table 3.2: Number of covariance parameter estimates for each model arranged in ascending order, with AIC for fitted models or reason for failure to obtain parameter estimates.....                                                              | 77 |
| Table 4.1: Summary of models fitted to the simulated data, where a (-) indicates a model which could not be used to simulate data as the random effects covariance was not positive-definite.....                                                | 87 |
| Table 4.2: Summary measures of AIC, BIC and AICc values for models successfully fitted to all simulated data sets.....                                                                                                                           | 93 |
| Table 4.3: Percentage occurrences where fitted models produced AIC, BIC or AICc values within two units of the minimum.....                                                                                                                      | 96 |
| Table 4.4: Percentage occurrences where fitted models produced AIC, BIC or AICc values within two units of the minimum when fitted to data simulated from the same model and the percentage when fitted to data simulated from other models..... | 97 |

|                                                                                                                                                                                                                                                   |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Table 4.5: For each simulated model set the fitted model pairs that both obtained within 2 units of the minimum AICc value for more than 40% of the simulated data sets.....                                                                      | 100 |
| Table 4.6: Mean coverage probabilities of fixed effects for each fitted model which was successfully fitted to all the simulated data.....                                                                                                        | 101 |
| Table 5.1: Fixed effects results for simplistic linear model with the nutrients and herbicide effects, including all two-way effects, under independent error covariance and random intercept and slope with unstructured covariance.....         | 114 |
| Table 5.2: Summary of model fitting results.....                                                                                                                                                                                                  | 116 |
| Table 5.3: Information criteria obtained under three different quadratic mean models for each of the covariance structures specified.....                                                                                                         | 154 |
| Table 5.4: Fixed effects results for advanced mean structures, including effects for herbicide, nutrients and the adjustment variables. These estimates were obtained under a no random effects model with unstructured error covariance.....     | 158 |
| Table 6.1: Model parameters and information criteria for models fitted to the training data. The fixed effects estimates appear in the same order as indicated by the model equation for the simplistic mean model described in Chapter five..... | 188 |

|                                                                                                                                                                                                |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Table 6.2: Forecasting statistics for linear model estimates, both marginal and conditional, obtained using the training data set (fitted data) and the validation data set (paired data)..... | 190 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                                                                  |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Table 6.3: Model parameters and information criteria for models fitted to the training data The fixed effects estimates appear in the same order as indicated by the model equation for the simplistic mean model described in Chapter five..... | 192 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                   |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Table 6.4: Forecasting statistics for quadratic model estimates, both marginal and conditional, obtained using the training data set (fitted data) and the validation data set (paired data)..... | 195 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
