ACKNOWLEDGEMENTS

Thanks to my supervisors Profs. Chris Henshilwood and Stein-Erik Lauritzen for suggesting this project and understanding when it took longer than expected to complete. It was an interesting, overwhelming and at times frustrating experience collecting, preparing, analysing and interpreting the information preserved in the drips and drops of the De Hoop speleothems. A special thanks to everyone, especially Dr. Marlize Lombard, Dr. Gerrit Dusseldorp and Dr. Geeske Langejans for helping me through the various stages of my project – from proposal to final submission and everything in between.

I would also like to thank Prof. Lauritzen for use of the Uranium series laboratory, Rune Søraas at the Bjerknes Centre for the stable isotope analyses and Siri-Lene Simonsen at the University of Oslo for the ICPMS analyses.

A permit to collect samples from the De Hoop caves was granted by the Western Cape Nature Conservation Board, South Africa. Funding for the degree was provided by a National Research Foundation (NRF) SARChI chair "The origins of modern human behaviour" grant held by Prof. Henshilwood at the Institute for Human Evolution, University of the Witwatersrand. Funding for travel expenses and the analyses of the speleothems at the University of Bergen was provided from a joint grant made to Profs. Henshilwood and Lauritzen by the Norwegian Research Council/NRF under the South African/Norwegian Programme for Research Co-operation.

Finally, to my mommy, Dominic, TJ and the rest of my family and friends thank you for believing in me when I didn't believe in myself.
