

LIST OF TABLES

Table	Page
-------	------

CHAPTER 1

1	Summary of the potential effects of oestrogen and progesterone on the hormonal metabolic regulators.....	16
2	Relative changes in the ovarian hormones between the follicular and luteal phase in relation to submaximal endurance performance.....	54

CHAPTER 2

1	Resting serum concentration of female hormones.....	83
2	Carbon-13 enrichment of expired air samples during labelled acetate infusion during three menstrual phases.....	83
3	Acetate correction factor during prolonged submaximal exercise during three menstrual phases.....	84

CHAPTER 3

1	Subject characteristics.....	96
2	Oestrogen and progesterone concentration at rest during various menstrual phases.....	102
3	Systemic palmitate and total FFA kinetics in the final 15 minutes	

of 90 min submaximal exercise during various menstrual phases.....	108
--	-----

CHAPTER 4

1	Subject characteristics.....	129
2	Record of solubility tests and pilot infusion trials.....	132
3	Conductivity of sample containers.....	133

CHAPTER 5

1	Subject characteristics.....	144
2	Resting ovarian hormone concentration profile for the respective menstrual phases.....	144

CHAPTER 6

1	Subject characteristics.....	152
2	Resting serum ovarian hormone concentration before each cycling time trial during the three menstrual phases.....	154
3	Measures of time trial performance during different phases of the menstrual cycle.....	155
