

LIST OF TABLES

Table 2.1:	Physical properties of platinum group metals.....	13
Table 2.2:	Properties of gold.....	21
Table 2.3:	Properties of base metals.....	23
Table 2.4:	Physical properties of base metals.....	23
Table 3.1:	Technical and electrical data of Planetary Mono Mill “Pulverisette 6” used for the study.....	85
Table 3.2:	Properties of various grinding bowls and grinding balls.....	87
Table 3.3:	Number of balls per grinding bowl.....	87
Table 3.4:	Filling of the grinding bowl.....	88
Table 4.1:	PGMs and Au values and limits for a single analysis of PGMs and Au concentrates obtained by NiS fire assay-ICP-OES technique.....	101
Table 4.2:	Base metal values and limits for a single analysis of PGMs and Au concentrates obtained by NiS fire assay-ICP-OES technique.....	102
Table 4.3:	Multiwave 3000 digestion program used for decomposition of grass and lichen sample.....	116
Table 4.4:	Multiwave 3000 digestion program used for decomposition of leaves and tree trunk samples.....	117
Table 6.1:	Variation of grinding speed and time.....	128

Table 6.2:	Percentage particle size distributions ($\% < 5 \mu\text{m}$ and $< 10 \mu\text{m}$) for different grinding modes (A – J).....	134
Table 6.3:	Description of slurry dispersants investigated.....	146
Table 6.4:	Description of slurry sample solution names at varied dispersant concentrations.....	151
Table 6.5:	Platinum 265.945 wavelength sensitivity and interfering elements.....	157
Table 6.6:	Palladium 342.124 wavelength sensitivity and interfering elements.....	158
Table 6.7:	Rhodium 343.489 analytical wavelength sensitivity and interfering elements.....	159
Table 6.8:	Ruthenium 187.534 analytical wavelength sensitivity and interfering elements.....	160
Table 6.9:	Iridium 224.260 analytical wavelength sensitivity and interfering elements.....	161
Table 6.10:	Osmium 228.226 analytical wavelength sensitivity and interfering elements.....	162
Table 6.11:	Analytical wavelengths selected for the determination of PGMs and gold.....	163
Table 6.12:	Analytical wavelengths selected for the determination of base metals.....	164
Table 6.13:	Phase durations used in manual strategy.....	165

Table 6.14: Optimized ICP-OES instrumental parameters used for the developed slurry method.....	168
Table 6.15: Percentage recoveries of PGMs and Au obtained with the elbow inserted between the spray chamber and the torch	172
Table 6.16: PGMs and Au calibration standards used.....	175
Table 6.17: Base metals calibration standards used.....	175
Table 6.18: Concentration range, regression line coefficient and student t-test for aqueous solution and standard addition calibration for PGMs and gold.....	184
Table 6.19: Concentrations of PGMs and Au by slurry method.....	185
Table 6.20: Percentage recoveries of the PGMs and gold by slurry method	186
Table 6.21: Limits of detection and quantitation for the PGMs and gold	189
Table 6.22: Detection limits for PGMs and gold by different methods	189
Table 6.23: Quantitation limits (QL) of PGMs and gold.....	191
Table 6.24: Reference and slurry concentrations of PGMs and Au.....	192
Table 6.25: T-tests for accuracy of PGMs and Au.....	193
Table 6.26: Reproducibility of the slurry method.....	195

Table 6.27:	Repeatability of the slurry method.....	196
Table 6.28:	Description of PGMs and gold concentrates.....	197
Table 6.29:	PGMs and Au concentrations by slurry method.....	198
Table 6.30:	Dissolved concentrations of PGMs and gold in the slurry solution.....	199
Table 6.31:	Ratios between slurry and dissolved PGMs and gold concentrations.....	200
Table 6.32:	Analyte partitioning in slurry solution.....	202
Table 6.33:	Percentage recovery of PGMs and Au by slurry method...	204
Table 6.34:	Accuracy of the PGMs and Au by slurry technique.....	205
Table 6.35:	T-test for PGMs and Au concentrations by slurry method against reference concentrations by NiS fire assay technique	206
Table 6.36:	Reproducibility of the slurry method.....	208
Table 6.37:	Repeatability of the slurry method.....	209
Table 6.38:	Base metal concentrations by slurry method.....	210
Table 6.39:	Dissolved base metals concentrations in the slurry.....	211
Table 6.40:	Ratios between filtrate and dissolved base metals concentrations.....	212
Table 6.41:	Analyte partitioning of base metals in the slurry solution	213
Table 6.42:	Percentage recovery of the base metals.....	215

Table 6.43: Detection and quantitation limits ($\mu\text{g mL}^{-1}$) of base metals	216
Table 6.44: Accuracy of the slurry method in base metals analysis.....	217
Table 6.45: T-test for the base metals.....	218
Table 6.46: Reproducibility of the slurry method in base metals determination.....	219
Table 6.47: Repeatability of the slurry method in base metals determination.....	221
Table 6.48: Concentrations of Ni, Cu, Fe and Co in biological samples by wet acid digestion.....	223
Table 6.49: Concentrations of Ni, Cu, Fe and Co in biological samples by slurry method.....	225
Table 6.50: Dissolved Ni, Cu, Fe and Co in biological samples slurry solutions.....	226
Table 6.51: Ratios between dissolved and base metal concentrations by slurry method in biological samples.....	228
Table 6.52: Analyte partitioning in biological samples.....	229
Table 6.53: Percentage recovery of Ni, Cu, Fe and Co in biological samples.....	232
Table 6.54: Accuracy of the slurry method in the determination of Ni, Cu, Fe and Co in biological samples.....	234
Table 6.55: T-test for Ni, Cu, Fe and Co in biological samples.....	235

Table 6.56:	Reproducibility of the slurry method.....	237
Table 6.57:	Repeatability of the slurry method.....	240
Table 6.58:	Comparison of percentage recoveries for Ni, Cu and Fe in biological samples.....	241
Table 6.59:	Slurry concentrations ($\mu\text{g g}^{-1}$) and percentage recoveries (%)	245
Table 6.60:	PGMs and Au concentrations by slurry method using thiocyanate reagent-dispersant medium.....	247
Table 6.61:	Concentrations of PGMs and Au in slurry filtrate.....	249
Table 6.62:	Ratio between PGMs and Au in the filtrate and in the thiocyanate slurry solution.....	250
Table 6.63:	Analyte partitioning in slurry solution containing thiocyanate as reagent-dispersant medium.....	251
Table 6.64:	Percentage recovery of PGMs and Au by slurry method using thiocyanate reagent-dispersant medium.....	252
Table 6.65:	Accuracy of slurry method using thiocyanate reagent- dispersant medium.....	253
Table 6.66:	T-test for the PGMs and Au accuracy by slurry method using thiocyanate reagent-dispersant medium.....	257
Table 6.67:	Reproducibility of PGMs and Au by slurry method using thiocyanate reagent-dispersant medium.....	256

Table 6.68:	Repeatability of PGMs and Au by slurry method using thiocyanate reagent-dispersant medium.....	257
Table 6.69:	Reproducibility and repeatability for PGMs and gold by aqua regia and SCN slurry methods.....	258
Table 6.70:	Percentage recovery for PGMs and gold by aqua regia and SCN slurry methods.....	259
Table 6.71:	PGMs and Au concentrations by slurry method using thiocyanate.....	261
Table 6.72:	PGMs and Au concentrations in the filtrate from slurry solution.....	261
Table 6.73:	Ratio between PGMs and Au in slurry solution and in the filtrate.....	262
Table 6.74:	Analyte partitioning of PGMs and Au in slurry solutions containing thiocyanate reagent-dispersant.....	263
Table 6.75:	Comparison of analyte partition values for AMC, LUC and LMC concentrates obtained by SCN slurry method.....	263
Table 6.76:	Percentage recoveries for PGMs and Au by slurry method using thiocyanate reagent-dispersant medium.....	264
Table 6.77:	Comparison of percentage recovery for PGMs and Au in concentrates by SCN slurry method.....	265
Table 6.78:	Accuracy of slurry method using thiocyanate reagent-dispersant.....	265

Table 6.79: T-test for the PGMs and Au accuracy in LUC and LMC concentrates.....	266
Table 6.80: Reproducibility of the slurry method.....	267
Table 6.81: Repeatability of slurry method.....	267
Table 6.82: Comparison of reproducibility and repeatability for PGMs and gold by slurry method using thiocyanate reagent-dispersant medium.....	269
Table 6.83: Student t-test for slurry method against reference concentrations from nickel sulfide fire assay technique for AMC QC concentrate.....	272
Table 6.84: Student t-test for slurry method against reference concentrations from nickel sulfide fire assay technique for LUC QC concentrate.....	272
Table 6.85: Student t-test for slurry method against reference concentrations from nickel sulfide fire assay technique for LMC QC concentrate.....	273
Table 6.86: Student t-test for slurry method against reference concentrations from nickel sulfide fire assay technique for PPC QC concentrate.....	273

Table 6.87: Student t-test for slurry method using thiocyanate reagent-dispersant medium against reference concentrations from nickel sulfide fire assay technique for LUC QC concentrate	274
Table 6.88: Student t-test for slurry method using thiocyanate reagent-dispersant medium against reference concentrations from nickel sulfide fire assay technique for LMC QC concentrate	275
Table 6.89: Direct mixing against additional grinding mixing percentage recovery and precision	276
Table 6.90: Summary of reproducibility and repeatability for PGMs and Au	277
Table 6.91: Summary of reproducibility and repeatability for base metals	278
Table 6.92: Summary of reproducibility and repeatability for PGMs and Au by slurry method using reagent-dispersant medium	279
