| SEMI-VARIOGRAM PLOTS                                                                     | xxv           |
| <br><b>CHAPTER ONE – INTRODUCTION</b>                                                    | <br><b>1</b>  |
| 1.1 Plan and Purpose of this Study . . . . .                                             | 2             |
| 1.2 Justification for this Study . . . . .                                               | 6             |
| 1.3 Preview of the Chapters to Follow . . . . .                                          | 6             |
| 1.4 Spatial Data and Software to be Used . . . . .                                       | 8             |
| <br><b>CHAPTER TWO – THE BASICS OF VARIOGRAPHY</b>                                       | <br><b>10</b> |
| 2.1 The Probabilistic Model of Geostatistics . . . . .                                   | 10            |
| 2.2 Assumptions Required by the Probabilistic Model of Geostatistics .                   | 13            |
| 2.3 The Semi-Variogram . . . . .                                                         | 15            |
| 2.3.1 Properties of the semi-variogram . . . . .                                         | 16            |
| 2.3.2 Commonly used semi-variogram models . . . . .                                      | 21            |
| 2.3.3 Estimation of the semi-variogram . . . . .                                         | 25            |
| 2.3.4 Fitting a valid semi-variogram model to the estimated semi-<br>variogram . . . . . | 28            |
| 2.3.5 Robust and relative estimates of the semi-variogram . . . . .                      | 30            |
| 2.3.6 Regularization . . . . .                                                           | 32            |
| <br><b>CHAPTER THREE – THE NUGGET EFFECT PARAMETER</b>                                   | <br><b>38</b> |
| 3.1 The Importance of Accurately Modelling the Nugget Effect . . . . .                   | 39            |
| 3.2 Nugget Interpretation . . . . .                                                      | 44            |
| 3.2.1 Kriging as an exact interpolator . . . . .                                         | 45            |
| 3.3 Difficulties in Modelling the Nugget Effect . . . . .                                | 48            |

|                                                                                                           |                |
|-----------------------------------------------------------------------------------------------------------|----------------|
| <b>CHAPTER FOUR – THE INFLUENCE OF SUPPORT SIZE ON SEMI-VARIOGRAM PARAMETERS</b>                          | <b>50</b>      |
| 4.1 Theory . . . . .                                                                                      | 50             |
| 4.2 Analysis of Actual Data . . . . .                                                                     | 57             |
| <br><b>CHAPTER FIVE – FITTING THE BEST SEMI-VARIOGRAM MODEL</b>                                           | <br><b>60</b>  |
| 5.1 Sentiments about Semi-Variogram Modelling . . . . .                                                   | 60             |
| 5.2 Aspects of Semi-Variogram Modelling put to the Test . . . . .                                         | 62             |
| 5.2.1 Fitting a semi-variogram model . . . . .                                                            | 62             |
| 5.2.2 The degree of detail required of semi-variogram modelling .                                         | 69             |
| 5.2.3 Practical problems occasionally experienced with the semi-variogram sill . . . . .                  | 74             |
| 5.3 Conclusions of Chapter 5 . . . . .                                                                    | 80             |
| <br><b>CHAPTER SIX – MODELLING THE SEMI-VARIOGRAM WHEN DATA IS LIMITED AND CLUSTERED OR WIDELY SPACED</b> | <br><b>81</b>  |
| 6.1 Possible Spatial Distribution Scenarios . . . . .                                                     | 83             |
| 6.2 Data Analysis – Limited, Clustered Data . . . . .                                                     | 86             |
| 6.2.1 The sill parameter under conditions of limited and clustered data . . . . .                         | 87             |
| 6.2.2 The nugget parameter under conditions of limited and clustered data . . . . .                       | 102            |
| 6.2.3 The range parameter under conditions of limited and clustered data . . . . .                        | 109            |
| 6.2.4 Real-life data example . . . . .                                                                    | 111            |
| 6.3 Conclusions of Chapter 6 . . . . .                                                                    | 122            |
