

BUILDING SOCIAL CAPITAL? THE CASE OF AFESIS-CORPLAN IN THE EASTERN CAPE PROVINCE.

Patrick Thingaambi Mudau

**A research report submitted to the Faculty of Engineering and the
Built Environment, of the University of the Witwatersrand, in partial
fulfilment of the requirements for the degree of Master of Science in
Development Planning.**

Johannesburg 2010

ACKNOWLEDGEMENTS

The author wishes to thank Amanda Williamson, the Supervisor of the research study for her endless support throughout the duration of the program; Professor Aly Karam, the Coordinator for the course Master of Science in Development Planning for his strong words of encouragement and support he gave throughout the program and Mr. Mlungisi Cecil Nduna for his crucial role in editing the entire research document.

The author would also like to thank Mr. Frederick Kusambiza and Thembi Mabhula from Afesis-corplan for their willingness to allow their project sites to serve as case studies for this research. Again is a pleasure for the author to thank the two gentlemen from Afesis-corplan for taking their time off to assist and be available for interviews.

The author would also like to thank the two community representatives Ms. Simi Mdingi from Ngxingxolo village in Mooiplaas area and Mr. Z. H. Gamaka from Mzintshane village for their role in introducing the researcher to the communities during interviews and also taking part in the interview sessions themselves.

Lastly, the author wishes to thank Promotion of Rural livelihoods (Ruliv), in the Eastern Cape for the support in providing the Eastern Cape rural information as well as financial contribution to the research work. Most importantly, the author wishes to thank some of the staff members at Ruliv for their support at some stages during the course of the research.

DECLARATION

I, Patrick Thingaambi Mudau do declare that unless specifically indicated to contrary, this is the result of my own work. Furthermore, I declare that the original material contained in this thesis has not been submitted to this or any other university in fulfilment of the requirement for another degree.

ABSTRACT

There has been a belief that conventional approaches to development failed for many years to reverse the trends of poverty in rural communities. As a result, the focus shifted to the Sustainable Livelihoods Approach that many development practitioners, policy developers and other players in rural development see as an alternative.

However, it appears that there is agreement from supporters of SLA that sustainable livelihoods in rural communities can be more realistically supported when social capital is built or/and strengthened from within. As a result, many livelihoods support programmes have been implemented across the world since 1992. Most of these projects were in rural areas of developing countries in Africa, Asia and South America (such as Bangladesh, Ethiopia, Gambia, Indonesia, Bolivia, Zambia, and Nepal as well as in South Africa).

In light of the above, the researcher has been prompted to investigate the relationship between Sustainable Livelihoods Approaches and social capital to find out if indeed the application of SLA in development programmes can facilitate building and/or strengthening of social capital in rural communities. Further, the research investigates to what extent the building of social capital contributes to the reduction of poverty and vulnerability in rural communities and households.

The research was undertaken in the Eastern Cape Province of South Africa. Two different rural villages were chosen as case studies because of their poverty levels and also because livelihood programmes had been implemented in the areas by the organization called Afesis-corplan.

The research concludes that Afesis-corplan has facilitated the strengthening of some social capital that existed and also built new networks. However, it is still to be seen if the work of Afesis-corplan will translate into an improved standard of living for those communities.
