

LIST OF FIGURES

Figure	Page
2.1. Stress-Strain Relationship of Concrete Tested in Compression	2-2
2.2. Stress-Strain Relationships in Compression for Various Strengths	2-2
2.3. Typical Stress-Strain Curve Relation in Direct Tension	2-3
2.4. Diagrammatic Representation of the Stress-Strain Curve Concrete	2-5
2.5. Diagrammatic Representation of the Stress-Strain Curve Steel	2-6
3.1. Experimental Setup of Test Beams – Komacec	3-5
3.2. Test Beam Section – Komacec	3-5
3.3. Test Setup 1 – Nguyen	3-7
3.4. Test Setup 2 – Nguyen	3-7
3.5. Typical Cross Section of Composite Beam – Nguyen	3-8
3.6. Loading Conditions in Testing	3-10
3.7. Channel and Embossments Details	3-10
4.1. Horizontal Shear Stresses in Symmetrical Beam	4-2
4.2. Typical Cross Section of Composite Beams	4-5
4.3. Loading Diagram – Komacec	4-9
4.4. Shear Force Diagram – Komacec	4-9
4.5. Moment Diagrams – Komacec	4-9
4.6. Transformed Uncracked Section	4-10
4.7. Composite member and Differential Element	4-12
4.8. Elastic Shear Distribution of Horizontal Shear	4-29
4.9. Komacec Series T1 (L = 1000mm)	4-31
4.10. Komacec Series T2 (L = 2000mm)	4-31
5.1. Stress Distribution for a Typical Homogeneous Rectangular Beam	5-2
5.2. States of Stress for Elements A1 & A2	5-4
5.3. Trajectories of Principal Stresses in Homogeneous Isotropic Beams	5-5
5.4. Web Shear; Flexural Shear & Flexural Cracking	5-6
5.5. Flexural Failure; Diagonal Tension Failure & Shear Compression	5-8

5.6.	Shear Resistance of Reinforced Concrete Beam Webs	5-11
5.7.	Shear Forces after Development of Diagonal Crack	5-15
6.1.	Typical Reinforced Concrete Beam	6-1
6.2.	Behaviour of Reinforced Concrete Beam under Increasing Load	6-2
6.3.	Beam Cross Section; Strains; Actual & Equivalent Stress Blocks	6-3
7.1	Tri-Linear Load-Deflection Relationship	7-1
7.2.	Variation of I_e with Moment Ratio	7-2
