ABSTRACT

Making innovation happen is one of the most important issues currently facing most companies in understanding how best to unlock value. As important as it is, it remains a fairly elusive value for most organisations, which, while acknowledging its importance, lack the ability to leverage it for value creation, much the same way organisational culture is acknowledged to be an important factor in the success of organisations. Yet, despite all its proclaimed values, 70% of all corporate culture change efforts result in failure.

The topic and practice of corporate entrepreneurship have attracted considerable interest from both corporate practitioners and academics alike. Much of the interest in this area is based on the acknowledgement that innovation is assumed to have critical importance for firms competing in rapidly evolving industries.

Within this interest, a particularly promising area of research focus has been that of entrepreneurial cognition. However, the focus in the area has largely been on individual entrepreneurship, the way entrepreneurs think, the individual decision-making processes and heuristics adopted by entrepreneurs. In line with this focus, there is an increased awareness of the need for a greater understanding of the processes and strategies of corporate entrepreneurship, particularly in the manner in which culture affects these entrepreneurial cognitive processes.

The purpose of this research is to develop a model that provides a description of the process of how culture affects corporate entrepreneurship. The rationale of the research is to help fill a gap in the literature by providing a model that describes corporate entrepreneurship as a process that is also affected by corporate culture.

DECLARATION

I, Boitumelo Sekhukhune, declare that this research report is my own, unaided work. It is submitted in partial fulfilment of the requirements for the degree of Master of Business Administration in the University of the Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination at this or any other university.

DEDICATION

In loving memory of my good friend and mother to my Godson

Tsakani “TK” Mhinga

You are dearly missed.

Your loving support was deeply needed throughout the duration of my studies and has been highly appreciated.

Rest in peace my friend, my black butterfly.

ACKNOWLEDGEMENTS

I wish to express my sincere thanks to:

- God, my creator and maker. It is only through your love and support that I have managed to survive this trying period.
- Dr Dominik Heil, who as my supervisor, provided me with critical academic support and was the original source of inspiration for this study.
- Ernest, my loving father, whose wisdom, strength and perseverance will continue to inspire me and Dorothy, my fabulous mother, whose strength has continuously made her my role model. I thank you both for your love and support throughout the MBA and beyond. Thank you for making this possible for me. I love you.
- Bonolo and Lerato, my magnificent sisters – you are my rock, always have been and always will be. I can never thank you enough for your love and incredible support. Huni and Neo, my little brother and sister, although years separate us, you both remind me of what I can be if I really apply myself.
- Stephen Kosseff, Khumo Shuenyane and the rest of the team at Investec – thank you for your assistance with introductions to various individuals and your outstanding participation in this research.
- My loving friends, Cyrille, Tsakani, Tshepi, Lerato, Nicole, Amanda, Kim, Edith, Hotlo, Jenni-Ruth, Adila, and those not mentioned but not forgotten - your understanding and love throughout this period have made it possible for me to do this. I can never love and thank you enough.

- Last but not definitely not least, Johan du Toit and the rest of the Decipher team. It was your assistance that made this possible for me. Thank you so very much.
