

TABLE OF CONTENTS

Chapter I: Introduction	1
References	5
Chapter II: Geochronology techniques	9
1. Introduction: General principles of geochronology	9
2. Choice of techniques	10
3. The U-Pb dating technique	11
a. Principles of the method	11
b. U-Pb SHRIMP dating	13
<i>SHRIMP systematics</i>	13
<i>Standardization</i>	14
<i>Sample preparation</i>	15
<i>Cathodoluminescence</i>	15
c. Data acquisition and statistic treatment of the data	15
d. Evaluation of the data	16
e. Data presentation	17
<i>The conventional "Wetherill" concordia diagram</i>	17
<i>The "Tera-Wassenburg" concordia diagram</i>	17
4. ^{40}Ar-^{39}Ar dating technique	18
a. Principles of the method	18
b. Ar-Ar mass spectrometry	20
<i>Concept of isotopic closure temperature in minerals</i>	20
<i>Step heating method</i>	22
<i>Sample preparation and procedure</i>	23
c. Data presentation	23
5. References	24
	28

Chapter III: A cryptic Mesoarchaeoan terrane in the basement to the Central African Copperbelt: U-Pb isotope evidence from detrital and xenocrystic zircons in the Muva and Katangan sequences

1. Introduction	28
2. Sampling	30
3. Analytical techniques	30
4. Detrital zircons	30
5. Xenocrystic zircons	31
6. Provenance of zircons	37
7. Cryptic mesoarchaeoan terrane	38
8. References	41

Chapter IV: Geochronology and nature of the Palaeoproterozoic basement in the Central African Copperbelt (Zambia and the Democratic Republic of Congo), with regional implications

1. Introduction	45
2. Regional geological setting and previous geochronology	46
3. Analytical methods	50
4. Results	51
a. Lufubu schists	51
<i>Geochemistry of the Lufubu schists</i>	51
<i>Mufulira Lufubu schist (sample LufMuf)</i>	55
<i>Kinsenda Lufubu meta-trachyandesite (sample KNS1)</i>	60
<i>Chambishi basin Lufubu schist meta-andesite (sample BN53/1)</i>	63
<i>Samba felsic metavolcanic schist (sample CT169.1256)</i>	65
b. Granitoids and granitoid gneisses	68

<i>Mkushi Gneiss (sample MGn)</i>	68
<i>Mtuga aplites (sample APL-1 and APL-2)</i>	71
<i>Mufulira Pink Granite (sample MPG)</i>	77
<i>Chambishi Granite (sample NN75/1)</i>	79
<i>Mulungushi Bridge augen gneiss (sample MFG-1)</i>	82
c. Basement ages from xenocrystic zircons in the Katangan Supergroup	85
<i>Roan Group tuff (sample Etoile 1)</i>	85
5. Discussion	87
a. Magmatic activity	87
b. Links with other Pakaeoproterozoic terrains in the vicinity of the Congo Craton, and regional tectonic history	88
c. Inherited zircons	99
6. Conclusions	103
7. References	104

Chapter V: Provenance ages of the Neoproterozoic Katanga Supergroup (Central African Copperbelt), with implications for basin evolution

1. Introduction	127
2. Regional geological setting	128
3. The Katanga Supergroup	129
a. Roan Group	129
b. Nguba Group – Mwashya Subgroup	131
c. Nguba Group – Grand Conglomerat Formation	131
d. Nguba Group – West Lunga Formation	132
e. Kundelungu Group – Petit Conglomerat Formation	133
f. Fungurume Group	133
g. Bianco Group	133
4. Analytical techniques	135

5. Results	136
a. Lower Roan Subgroup	136
b. Nguba Group – Mwashya Subgroup	146
c. Nguba Group – Grand Conglomerat Formation	146
d. Bianco Group	149
6. Discussion	154
a. Lower Roan Subgroup	154
b. Nguba Group – Grand Conglomerat Formation	155
c. Kundelungu Group – Petit Conglomerat Formation	159
d. Bianco Group	161
7. Conclusions	162
8. References	163

Chapter VI: Monazite U-Pb dating and ^{40}Ar - ^{39}Ar 177

thermochronology of metamorphic events during the Lufilian Orogeny

1. Introduction	178
2. Regional setting	178
3. Analytical methods	179
4. Sampling	181
5. Results	184
a. Muliashi South deposit (Luanshya), sample BH89/3, biotite	184
b. Chambishi basin, sample RCB2/72, monazite	186
c. Chambishi basin, sample NN75/26, biotite	187
d. Chambishi basin, RCB1/36, monazite	189
e. Chambishi basin, sample RCB2/112, monazite	190
f. Chambishi basin, sample RCB2/112, biotite	191
g. Chambishi basin, sample RCB2/4, biotite	193
h. Chambishi basin, sample MJZC9/25, biotite	194
i. Chambishi basin, sample NN75/9, biotite	196

j. Nchanga, sample NCH1, biotite	197
k. Konkola, KN1A, biotite and muscovite	199
l. Musoshi (DRC), sample MUS1, microcline	202
6. Discussion	204
a. Geochronology	204
b. Regional implications	206
7. References	209

Chapter VII: Summary **217**

1. The Basement	217
2. The Katanga Supergroup	218
3. Metamorphic events affecting the Lufilian Orogeny	219
4. Conclusion	220

Appendix: Abstracts **221**

- 1. A fertile Palaeoproterozoic magmatic arc beneath the Central African Copperbelt.** C. Rainaud, R. A. Armstrong, S. Master, L. J. Robb. Presented at the 5th biennial SGA meeting and the 10th quadrennial IAGOD symposium, London, UK, 22-25 August 1999.
- 2. A cryptic Mesoarchaeon terrane in the basement to the Central African Copperbelt: U-Pb evidence from detrital and xenocrystic zircons from the Muva and the Katangan sequences.** C. Rainaud, S. Master, R. A. Armstrong, L. J. Robb. Presented at the 18th colloquium of African Geology, Graz, Austria, 3-7 July 2000.
- 3. New age constraints on Proterozoic orogenic events in Central and Southern Africa.** S. Master, L. J. Robb, R. A. Armstrong, C. Rainaud. Presented at the 31st International Geological Congress,

Rio de Janeiro, Brazil, 6-17 August 2000.

- 4. Contributions to the geology and mineralization of the Central African Copperbelt: I. Nature and geochronology of the pre-Katangan basement.** C. Rainaud, R. A. Armstrong, S. Master, L. J. Robb, P. A. C. C. Mumba. Presented at the 11th Quadriennial IAGOD symposium and GEOCONGRESS 2002, Windhoek, Namibia, 22-26 July 2002.
- 5. Contributions to the geology and mineralization of the Central African Copperbelt: II. Neoproterozoic deposition of the Katanga Supergroup with implications for regional and global correlations.** S. Master, C. Rainaud, R. A. Armstrong, D. Phillips, L. J. Robb. Presented at the 11th Quadriennial IAGOD symposium and GEOCONGRESS 2002, Windhoek, Namibia, 22-26 July 2002.
- 6. Contributions to the geology and mineralization of the Central African Copperbelt: IV. Monazite U-Pb dating and ^{40}Ar - ^{39}Ar thermochronology of metamorphic events during the Lufilian orogeny.** C. Rainaud, S. Master, R. A. Armstrong, D. Phillips, L. J. Robb. Presented at the 11th Quadriennial IAGOD symposium and GEOCONGRESS 2002, Windhoek, Namibia, 22-26 July 2002.
- 7. Contributions to the geology and mineralization of the Central African Copperbelt: V. Speculations regarding the “Snowball Earth” and redox controls on stratabound Cu-Co and Pb-Zn mineralization.** L. J. Robb, S. Master, L. N. Greyling, Y. Yao, C. Rainaud. Presented at the 11th Quadriennial IAGOD symposium and GEOCONGRESS 2002, Windhoek, Namibia, 22-26 July 2002.
- 8. Recent developments in the Central African Copperbelt: geological, geochronological and metallogenic perspectives.** L.

J. Robb, S. Master, C. Rainaud, L. N. Greyling, Y. Yao. Presented at the Geoforum 2003, Geological Society of South Africa annual meeting, Johannesburg, South Africa, 25-27 June 2003.

- 9. Chronological constraints on the genesis of stratiform Cu-Co mineralization in the Katangan of central Africa and implications for models of ore formation.** L. J. Robb, R. A. Armstrong, S. Master, C. Rainaud. IGCP 450 Meeting and Field excursion, Lubumbashi, Democratic Republic of Congo, 14-25 July 2003.

- 10. Timing of Cu-Co and Pb-Zn mineralization in the Central African Copperbelt: a link to Neoproterozoic glaciations?** L. J. Robb, S. Master, R. A. Armstrong, C. Rainaud, L. N. Greyling. Fermor Flagship Meeting 2003, Cardiff University and The National Museum of Wales, UK, 19-21 August 2003.

- 11. Fluid Inclusion Characteristics of the Copperbelt, and overview of Katangan geochronology.** L. N. Greyling, C. Rainaud, M. Cathelineau, M.-C. Boiron, Y. Yao. Mineralogy and Geochemistry of Base Metal Deposits in Southern Africa, RAU, South Africa, 23 September 2003.
