Page

CHAPTER 1

1. Introduction 1

1.1 The Description of Post Traumatic Stress Disorder (PTSD) 7

1.2 Trends in the Development of PTSD 10

1.3 Diagnosis and Differential Diagnosis of PTSD 13

1.3.1 Diagnostic criteria for PTSD 14

1.3.2 Differential diagnosis 16

1.4 Demographic characteristics of Sebokeng Township 22

CHAPTER 2

2. Literature Review 24

2.1 A Brief History of the Concept of PTSD 24

2.2 The History of PTSD in Children 31

2.2.1 Current debates on PTSD and children 36

2.3 PTSD in Children: The South African Context 39

2.3.1 The child's socio-economic status 45

2.3.2 The child's age 45

2.3.3 The child's personality and temperament 46

2.3.4 The child's gender 46

2.3.5 The child's availability (or lack) of social support 47

2.4 Research Rationale 48

2.5 Aim of the Study 52

2.5.1 Hypotheses 53

2.6 Conclusion 53

CHAPTER 3

3. Research Methodology 55

3.1 Design 55

3.2 Method 56

3.2.1 Subjects 56

3.2.2 Procedure 59

3.2.2.1 The Pilot Study 60

3.2.2.2 The Study 60

3.2.2.3 Instrumentation 62

CHAPTER 4

4 Results 67

4.1 Introduction 67

4.2 Scoring and Statistical Procedure 69

4.2.1 Scoring 69

4.2.2 Statistical procedures 71

4.3 Analysis of Results 73

4.3.1 General Description of the sample 73

4.3.2 Hypothesis 1: A higher presence of PTSD in a sample of learners in primary schools in a Black township will be observed 78

4.3.3 Hypothesis 2: The frequency of exposure to stressful events will be much greater for boy than girls 87

4.3.4 Hypothesis 3: The severity of the PTSD symptoms is related to gender differences 98

4.3.5 Hypothesis 4: Significant differences will not be found in the frequency of PTSD across different schools

102

CHAPTER 5

5. Discussion 108

5.1 Discussion of the Results 108

5.1.1 Hypothesis 1: A higher presence of PTSD in a sample of learners in primary schools in a Black township will be observed 109

5.1.1.1 The child's family cohesion 115

5.1.1.2 A child's level of development 117

5.1.1.3 Child's socio-economic status 119

5.1.1.4 Gender of child 120

5.1.2 Hypothesis 2: The frequency of exposure to stressful events will be much greater for boys than girls 121

5.1.3 Hypothesis 3: The severity of the PTSD symptoms is related to gender differences 123

5.1.4 Hypothesis 4: Significant differences will not be found in the frequency of PSTD across different schools

123

CHAPTER 6

6 Conclusion 126

6.1 Research Limitations 127

6.2 Theoretical Issues 130

6.3 Recommendations 132

6.4 Implication for Further Studies 133

Reference List 135

Appendix 1: A letter of approval from the Gauteng Department of Education 147

Appendix 2: A letter of approval from School principal (Sample) 148

Appendix 3: A signed consent form from a parent (Sample) 149

Appendix 4: The original version of the When Bad Things Happen (WBTH) scale 150

Appendix 5: A letter of approval from the author of the WBTH scale 151
