acknowledgements

Without the love and support of Badresh Kara, this degree would not have been a reality. Eternal gratefulness is due to you.

Khyal's fourteen-year-old wisdom and insistence on the completion of the research, especially when things got tough, inspired me not to relinquish the dream. Sagar, thank you for insisting that I dance with you, particularly on the stressful days. Milan, thank you for understanding and letting me be. I love you all.

I offer my humble gratitude to: Kyle-Philip Coulson for graphics advice and fun times, Imke Bolt for ensuring precision of wording, Sieg Schmidt for allowing me the space to fulfil an ambition and to Prof. Gerald Steyn for the morning coffees and slow release of guidance.

And not least of all, I acknowledge the sound supervision of Solam Mkhabela. Thank you for getting me to the finish line.

I am because you all are.
