

Fig. 2.16: Symmetrical fold D in the northwestern part of the collar, as mapped during this study. The fold is less faulted on the limbs than the other folds in the collar. (a) 1: 25 000 aerial photograph of the fold structure (locations 555-560, see Appendix No. 6). (b) and (c) Lower hemisphere equal area stereographic projection of the poles to bedding and the joint pattern on the northern (b) and as contour plot for joints on the western (c) limbs of the fold structure. (d) Axial plane is given as bold great circle
