APPENDIX IV
Spouts

-Photographs of sherds where specific details are captured, as they could not be easily demonstrated by drawings.

-Photographs within this appendix will demonstrate the difference between spouts located in different areas within and outside southern Africa border.

1. Namibia sites

No spouts were noted in Namibia from the sample studied during this research. Other archaeologists do acknowledge the presence of spouts in Namibia but unfortunately the available sample during my study did not indicate any spouts.

2. Die Kelders

-

Spouted vessels from Die Kelders. The spout is decorated only around the opening.

3.Bambata cave

A spout from Bambata cave. Decorations are only noted closer to the spout opening.

-

4. Hyrax hill & Ngamuriak

Spouted vessel from Hyrax hill. Stamping on the vessel is around the rim and extending further down in clear defined portions around the vessel.

The combination of a lug and a spout on the same vessel. No decoration on the surface of the vessel expects stamping noted on the surface of the spout only.
