

ACKNOWLEDGEMENTS

Most importantly, I wish to thank the Almighty Creator for always guiding me and giving me the zest to continue despite adversities.

My heart-felt gratitude to:

1. My family and friends, here and abroad, for their continued support, encouragement and patience during my studies.
2. Drs T. Omar and P. Michelow, my supervisors, for all their assistance, advice, support and encouragement.
3. Consultants, registrars, medical officers, technologists, technicians, nursing sisters, administrative and support staff at the Department of Anatomical Pathology and Cytology, NHLS for assistance in selection of participants, sample collection and administration.
4. Mr Eric Liebenberg, Department of Anatomical Pathology, NHLS for excellent digital photography accompanying this dissertation.
5. Professor P. Becker, Statistician, MRC Johannesburg South Africa, for his invaluable input and generosity with his time.
6. Mrs Lilly Bataglia and staff at the NHLS Library for all their assistance.

*One person with passion is better than forty people merely interested
(E.M. Forster).*
