ACKNOWLEDGEMENTS

I would like to extend my gratitude to my Almighty Father for granting me strength and wisdom to complete this task as best as I could.

I would also like to thank my supervisor, Nicky Israel, for the timely responses and useful advice for the completion of this project.

Lastly I would like to thank all the individuals who participated in this study. Thank you for sparing your time and filling in the questionnaires. You were all very helpful in revealing the dynamics pertaining to this research topic.

ABSTRACT

This current study aimed to investigate the nature of the relationships between aspects of perfectionism and academic performance in students from a South African university. The study attempted to ascertain whether various aspects of perfectionism predicted academic performance. The study likewise sought to establish whether the relationship between perfectionism and academic performance was moderated by proneness to depression. The study was envisaged to add theoretical clarity and direction in establishing the possible role played by various aspects of perfectionism in academic performance, and whether the nature of the relationships between various aspects of perfectionism and academic performance differed based on proneness to depression. This is important as behavioural patterns within varying personality structures can subsequently influence academic success, as outlined in the literature (O'Connor & Paunonen, 2007). Thus, this study has potential implications for universities, lecturers, and policy makers in the formulation of curricula and likewise accommodating individuals with various needs and personality types. This study could help to inform lecturers about who will perform exceptionally well in class and who might possibly struggle.

Keywords: academic performance, perfectionism, proneness to depression, university students.
