

DECLARATION

I declare that this dissertation is my work. It is being submitted for the degree of Master of Sciences in Medicine in the field of Nuclear Medicine, Faculty of Health Sciences, University of the Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination in any other university.

Kayode Adedapo

Date

This research was approved by the committee for Research on Human Subjects, University of the Witwatersrand (protocol M080621) and was carried out at the Nuclear Medicine department of the Johannesburg Hospital in 2008

Dedication

To God almighty, the giver of life and opportunities be all the glory, honour and majesty

Abstract

A 20 years retrospective study of all patients treated at the Johannesburg Hospital with radioactive iodine post thyroidectomy for differentiated thyroid carcinoma from 1986 to 2006 was carried out with the aim of determining the adequate duration and modality of follow-up.

A total of 106 patients (91 female and 15 male) out of 287 patients qualified for inclusion into the study. The mean age of the patients was 45 years (range: 16-81 years). There was a ratio of 6 females to 1 male. The mean ages of incidence in papillary, follicular, Hurthle and mixed papillary and follicular cancers were 40, 49, 53 and 49 years respectively. Only the ages of the patients with papillary cancer differed significantly from the ages of patients with other cancers ($p=0.011$). Of the 4 histologic types of cancer recorded, papillary thyroid cancer was the most common 58 (55%) followed by follicular 30 (28%), Hurthle cell 10(9%) and the mixed papillary-follicular cancers 8 (8%).

More than half of the patients 58 (53.7%) had total thyroidectomy, while 36(34%), and 12(11.3%) patients had near total thyroidectomy and lobectomy respectively. Majority of the patients with papillary carcinoma (35 out of 58), and Hurthle cell carcinoma (6 out of 10) had total thyroidectomy. All patients had complete 24 months follow-up after a negative whole body iodine scan. A proportion of the patients were followed up to 36 and 60 months after a negative whole body iodine scan.

The mean iodine dose administered by the first 6 months of follow-up was 3.3GBq (88mCi). Following the first iodine treatment, 58 of 101 patients were iodine scan negative. The remaining 43 patients progressed to a negative scan by the fourth treatment.

The histology and the type of surgery did not affect the outcome of iodine therapy in the patients studied.

The proportion of patients with negative whole body iodine scan after radioactive iodine ablation increased progressively from 58 out of 101 (57.4%) at the first 6 months to 99 of 101(98%) by 24 months of follow up.

Twenty four months was found to be the minimum adequate follow-up period, while the modality of follow-up was whole body iodine scan and thyroglobulin determination in concordant patients on and off T_4 suppression.

ACKNOWLEDGEMENTS

I am grateful to my supervisor Prof. MDT Vangu for his deep interest in me, this work and the entire training process for the award of an M.Sc in Nuclear Medicine. Your desire and commitment to see Nuclear Medicine in Nigeria grow to an enviable status in the West African sub region is recognized and fully appreciated.

I am extremely indebted to my head of department and mentor Prof. BOA Osifo for her belief in me and all the support she has given to make this dream of a Master's degree in Nuclear Medicine a reality.

I am grateful to the chief medical director of my hospital University College Hospital (UCH) for making the financial support for this study possible, God bless you sir.

Immense gratitude goes to all the consultants in the department of nuclear medicine for showing me the path to follow; Carlos, Sindy and Sonto.

I shall always remember the friendship and camaraderie atmosphere under which I gleaned from the registrars; Nico, Shireen, Kaushica, Hema and Lizzete. Thank you all.

I am grateful to Dr Elena Libhaber and Prof. Geoffrey Candy for my data analysis. I could not have made much sense of the study without your expertise. Thank you very much.

I thank my good friend Mr. Bode Akindele and his wife Dr Kemi Akindele for having me to stay with them during the duration of this course in Johannesburg. May the Lord bless and reward your labour of love.

I will miss the friendship of Mr. Maleeme the assistant director of radiography at the Johannesburg Hospital as well as all the other radiographers without which my learning will not be complete. Ma Emily, the departmental secretary is appreciated for her assistance, as well as all other paramedical members of staff.

Finally, I appreciate my one and only true love Dr Adura Adedapo and my lovely children Dami, Ife and Ini for their understanding and love during my period of long absence from the closeness we used to share. You all will remain indelible in my heart and the success of this work is because you all loved me.

TABLE OF CONTENTS

	Page
Declaration	i
Dedication.....	ii
Summary	iii
Acknowledgments.....	iv
Table of Contents.....	v
List of Abbreviations.....	ix
Chapter 1: Introduction.....	1
1.1 Brief anatomy of the thyroid Gland	1
1.1.1 Description of thyroid gland.....	1
1.1.2 Blood supply and drainage.....	1
1.1.3 Nerve supply.....	1
1.1.4 Lymphatic drainage.....	1
1.2 Brief physiology.....	1
1.2.1 Synthesis of thyroid hormones.....	2
1.2.2. Storage.....	2
1.2.3 Control of Secretion.....	2
Chapter 2: Thyroid cancer.....	4

2.1	Epidemiology.....	4
2.2	Histological types.....	4
2.2.1	Papillary thyroid cancer.....	4
2.2.2	Follicular thyroid cancer.....	5
2.2.3	Hurthle (oxyphil or oncocytic) Cell Cancer.....	5
2.2.4	Anaplastic Thyroid Cancer.....	5
2.2.5	Medullary Thyroid cancer.....	5
2.2.6	Metastatic cancer to the thyroid.....	6
2.2.7	Malignant lymphoma.....	6
2.3	Diagnostic Approach.....	6
2.4	Pathological Staging.....	6
2.4.1	Primary tumour (pT).....	7
2.4.2	Regional lymph nodes (N).....	7
2.4.3	Distant metastasis (M).....	7
2.4.4	Staging Protocol.....	7
2.4.5	Staging for Medullary carcinoma.....	7

Chapter: 3	Management of differentiated thyroid cancer.....	8
3.1	Surgery.....	8
3.2	Prognosis.....	8
3.3	Follow-up of differentiated thyroid cancer.....	9
3.3.1	Radioactive Iodine (RAI) Ablation.....	9
3.3.2	Side effect of radioactive iodine	10
3.3.3	New concepts in follow –up of Patients.....	10
3.3.3.1	Serum Thyroglobulin.....	11
3.3.3.2	Neck Ultrasonography.....	11
3.3.3.3	Recombinant TSH.....	11
3.3.4	Thyroglobulin Elevated, Negative Iodine Scan (TENIS).....	12
3.3.5	External Beam Radiotherapy (EBR).....	12
Chapter 4:	Methods.....	13
4.1	Objective.....	13
4.2	Study design.....	13

4.3	Study population and sampling.....	13
4.3.1	Inclusion criteria.....	13
4.4	Ethical issues.....	14
4.5	Confidentiality.....	14
4.6	Data management and analysis.....	14
Chapter 5: Results.....		15
5.1	Demographics.....	15
5.2	Surgery and Post Surgical follow-up.....	15
5.3	Thyroglobulin level and iodine scan.....	15
5.4	Dose and number of radioiodine treatments.....	16
5.5	Metastasis.....	16
Chapter 6: Discussion.....		25
Chapter 7: Conclusion.....		28
References.....		29
Appendix.....		30

LIST OF ABBREVIATIONS

DNM- Department of Nuclear medicine

DTC – Differentiated Thyroid Cancer

PTC – Papillary Thyroid Cancer

FTC – Follicular Thyroid Cancer

HTC – Hurthle cell Thyroid Cancer

MTC – Medullary Thyroid cancer

ATC – Anaplastic Thyroid Cancer

Tg -Thyroglobulin

MEN - Multiple Endocrine Neoplasia

TNM – Tumour Nodes, Metastasis

RRA – Radioactive Remnant Ablation

RAI - Radioactive Iodine

TSH - Thyroid Stimulating Hormone

WBS – Whole Body Scan

I-131 – Iodine -131

RhTSH- Recombinant Human Thyroid Stimulating Hormone

FT3 - Free Triiodothyronine

FT4 – Free Thyroxine

LT4 – Levothyroxine

FNAC - Fine Needle Aspiration Cytology

CT – Computerized Tomography

US – Ultrasound

TENIS – Thyroglobulin Elevated Negative Iodine Scan

EBR- External Beam Radiotherapy
