DECLARATION

I Lineo 'Mamphi Motopi declare that this research report *Human Papillomavirus (HPV) vaccine immunisation as an intervention programme for the prevention of cervical cancer and other similar HPV genotype-related diseases in South Africa: Some Ethical and Legal Matters for Consideration* submitted for assessment for the MSc Medicine (Bioethics and Health Law) is my own unaided work.

I have followed the required conventions in referencing the writing, ideas, and thoughts of others. It is being submitted for the degree of Master of Science in Medicine (Bioethics and Health Law) at the University of the Witwatersrand, Johannesburg.

This work has not been submitted for any other degree or examination at any other academic institution.

ABSTRACT

A new opportunity to reduce cervical cancer deaths as well as other HPV associated diseases arises from recently developed prophylactic vaccines. A large body of scientific literature concludes that the vaccines provide 100% protection against the oncogenic (high-risk) HPV types 16 and 18, which are responsible for about 70% of all cervical cancers in women. The vaccines also protect against infections with HPV 6 and 11, the cause of about 90% of genital warts (condylomata acuminata) in both males and females. South Africa is faced with uncertainties about how to implement a HPV vaccine immunisation programme aimed at the improvement of health in relation to the burden of disease caused by cervical cancer and related HPV-implicated diseases whilst struggling to provide the most basic of healthcare services in the midst of a HIV pandemic and a diminished base of key healthcare professionals. In such a context and relative to other priorities and the comparative benefits of different interventions, should, and if so why should South Africa invest in a HPV vaccine immunisation programme; likewise, if not, why not? In this research, report I will provide the main ethical and legal issues related to the implementation of a National HPV vaccine immunisation intervention programme. The research method used is a literature review of some ethical & legal issues in HPV vaccine immunisation analysing findings by way of critical thinking and moral reasoning. The outcomes of my research report suggest that South Africa is bound ethically and legally to provide HPV vaccine immunisation as an intervention to reduce the scourge of HPV infections, especially cervical cancer-based on the outcomes, I make recommendations concerning policy changes at the National level. These changes include interventions targeting the youth with an HPV vaccine immunisation programme included as one type of intervention.

Table of Content	page
Chapter 1 Introduction, Literature Review and Methodology	1
1.1 The burden of cervical cancer	
1.2 South African cervical cancer statistics	4
1.3 Risk factors for cervical cancer	6
1.4 Human Papillomaviruses (HPV) and cervical cancer	8
1.5 HPV infection preventative strategies	10
1.6 Vaccine development, efficacy, safety, and cross protection of other HPV genotypes	11
1.7 Public Health considerations in HPV vaccine immunisation programmes: The challenges	
1.7.1 Basic issues in public health interventions	12
1.7.2 Efficacy: Can the HPV vaccine stand up to the rule that vaccines are efficacious?	13
1.7.3 Cross protection: Can the HPV vaccine offer any cross-protection?	14
1.7.4 Safety and duration of protection: How safe is the HPV vaccine? How long does one dose last?	15
1.7.5 Cost: Can the South African government afford the HPV vaccine immunisation?	
1.7.6 Challenges: What are some of the other challenges? faced with when introducing the HPV vaccine immunisation?	16
1.8 Methodology, objectives, and outcomes	17
1.8.1 Design	17
1.8.2 Methods	17
1.8.3 Objectives	18
1.8.4 Outcomes	18
1.8.5 Limitations	18

Chapter 2 Ethical Issues Concerning HPV vaccine immunisation in South Africa

2.1 Introduction	20
2.1.1 Purpose of immunisation programmes	20
2.1.2 General controversies in vaccine immunisation programmes	21
2.1.3 The individual and the public	22
2.1.4 Ethical basis of most public health vaccine immunisation programmes	27
2.1.5 Possible dominance of Pharmaceutical industry with HPV programme	30
2.2 Some ethical issues in HPV vaccine immunisation	32

Chapter 3 Legal Issues in HPV vaccine immunisation

3.1 Legal issues in vaccine immunisation of children in South Africa	41
3.2 Legal issues in HPV vaccine immunisation: Female and male children	44
3.3 Specific legislation on reproductive health of children, consent and debut	47
3.3.1 Age of sexual consent	48
3.3.2 Sexual debut	53

Chapter 4 Policy Recommendations and Concluding Remarks

4.1 Policy development, recommendations, delivery strategies and monitoring & evaluation	57
4.2 Concluding remarks	62
References	64
