I, Chih-Hao Lu am a student registered for Master of Architecture [Professional] in the year 2009. I hereby declare the following:

I am aware that plagiarism [the use of someone else's work without permission and/or without acknowledging the original sources] is wrong. I confirm that the work submitted for assessment for the above course is my own unaided work except where I have stated explicitly otherwise. I have followed the required conventions in referencing thoughts, ideas, and visual materials of others. For this purpose, I have referred to the Graduate School of Engineering and the Built Environment style guide. I understand that the University of the Witwatersrand may take disciplinary action against me if there is a belief that this is not my unaided work or that I have failed to acknowledge the source of the ideas or words in my own work.

Acknowledgements

I would like to thank my family for the support and love.

Special thank to:
- Ludwig Hansen, Vaughn Horsmen and Gerald Chungu for guidance and valuable criticism
- Paul Kotze for the constant support and encouragement during each review
- TC Design Architect for the valuable information for the precedent study of Head office for Department of Foreign Affairs
- Every one from Batley Partners for the education of large scale buildings

Abstract

The structuring and forming of the negative space can be found in element as small as an electron molecule to element as large as the solar system, hence the importance of the negative space. Negative space allows our city and architecture to be appreciated and furthermore, function as a single system.

The subject matter of this thesis is about the making of urban space and its relationship with the architecture and people. How should the urban space be designed for its people and architecture, and furthermore, how should the architecture responses back to its urban space? These are the questions that I will be asking myself constantly throughout the entire thesis.

The question is then answered through a design of an urban space and architecture. The design explores the connectivity between urban spaces, functions and architectures, and furthermore, to be functioned as a single system.
