Supervisor: Esther Price
Title: Assessment of Risky Sexual Practices with respect to HIV among South African young adults

Total Word Count: 14 888

(Excluding: title page, plagiarism declaration, acknowledgments, all content information, references and appendices).

I hereby declare that I, Mma-Lerato Seboka, know and accept that plagiarism (i.e., to use another's work and to pretend that it is one's own) is wrong. Consequently, I declare that:

- This research report is my own work
- I have correctly acknowledged all direct quotations and paraphrased ideas/content. In addition I have provided a complete, alphabetized reference list, as required by the APA method of referencing.
- I have not allowed, and will not allow, anyone to copy my work with the intention of passing it off as his or her own work.
- I understand that the University of Witwatersrand may take disciplinary action against me if there is a belief that this is not my own unaided work, or that I failed to acknowledge the source of the ideas or words in my writing.
- The word count (excluding the Reference List) given above is correct.

Date: _____

ACKNOWLEDGEMENTS

I wish to express my sincere gratitude to the following people who contributed and supported this research:

- My Lord and Saviour for granting me an opportunity to be part of Wits Masters Program and giving me strength and perseverance throughout challenging times.
- My supervisor, Esther Price, for her valuable time, support, guidance and tolerance during this long process.
- Lastly, many thanks to Psychology undergraduate lecturers and students at WITS for their assistance in data collection.
- To my family (my dearest husband Moorosi, my two beautiful children, Bokang and Sechaba, “my love and gratitude goes out to you” (*without you I could never have succeeded*). My sister Mmamohau, thank you for all your trouble in assisting me through the year and nothing was too much for you, “dankie *Thloki*”).

ABSTRACT

South Africa is one of the countries hardest hit by the HIV/AIDS pandemic in the world. With ever increasing prevalence rates of HIV infection, those who fall within the 14 - 29 years age group remain the population most at risk for HIV/AIDS. In spite of educational and awareness campaigns, the rates of new infections continues to rise among this age group, suggesting that these campaigns alone may not be as effective as was initially envisioned. Research exploring factors that may mediate or moderate the relation between HIV awareness and knowledge and behaviour has proliferated in recent years. The present study investigates whether the Health Belief Model constructs predict and perhaps moderate the relation between HIV knowledge / awareness and Risky sexual practices. The study further explores the role of Sexual orientation and attempts to reflect on the question of whether education and awareness programmes should be tailored for specific sub-populations. The sample consisted of 200 second year university students from the Humanities Faculty at the University of the Witwatersrand. Participants completed a survey of questions that consisted of Demographic information, Sexual Practices Questionnaire, HIV Knowledge Questionnaire, an AIDS Health Belief scale and Generalized Self efficacy Scale. Results yielded a significant relation between Perceived benefit (Health Belief Model construct) and HIV knowledge. No other significant differences were identified between the other variables.

TABLE OF CONTENTS

	Page
Title page	i
Plagiarism declaration	ii

Abstract	iv
Table of contents	v
List of graphs	viii
List of tables	ix
Chapter 1: Introduction	1
1.1 General Introduction	1
1.2 Aim	2
1.3 Significance of the study	2
Chapter 2: Literature Review	3
2.1 Introduction	3
2.2 Adolescence.....	4
2.3 Understanding sexual attitudes and behaviour.....	5
2.4 Stereotyped attitudes in young adults.....	6
2.5 Vulnerability of young adults to HIV infection.....	8
2.6 HIV Risk factors	9
2.6.1 Condom use.....	10
2.6.2 Gender.....	10
2.6.3 Sexual Practices.....	11
2.7 Culture and behaviour change.....	12
2.8 The Health Belief Model	12
2.9 Self Efficacy.....	17
2.10 Research Questions.....	18
Chapter 3: Methodology	20
3.1 Research Design	20
3.2 Research Sample	20

3.3 Participants	21
3.4 Procedure	21
3.5 Measures	23
3.5.1 AIDS Health Belief Scale	23
3.5.2 HIV Knowledge Questionnaire	24
3.5.3 Demographic Questionnaire	24
3.5.4 Sexual Practices Questionnaire.....	24
3.5.5 The Generalized Self Efficacy Scale	25
3.6 Data analysis	26
3.6.1 Preliminary Analysis	26
3.6.2 Main Analysis	26
3.7 Ethical Considerations	27
 Chapter 4: Results	 28
4.1 Introduction	28
4.2 Descriptive statistics	28
4.2.1 Demographic of the sample	28
4.3 Means and Standard Deviation.....	32
4.4 Correlation Analyses of the variables	33
4.5 Preliminary Analyses	35
4.6 Main Analyses	39
4.6.1 What level of HIV knowledge do young adults in a university have?.....	40
4.6.2 Does HIV knowledge predict Risky sexual practices.....	42
4.6.3 Which of the constructs of the Health Belief Model: Perceived susceptibility, Perceived severity, Perceived benefits and Perceived barriers predict Risky sexual practices?.....	42
4.7 Post-hoc Analyses.....	44
4.7.1 Correlation Analyses.....	45
 Chapter 5: Discussion	 51

5.1 Limitations of the study	55
Chapter 6: Conclusion	57
Chapter 7: Recommendations	59
References	60
Appendices	65
